

**aran** IBC

## Packages for liquid transport in the IBC method.

### silverline

Metalized bag with oxygen barrier.

### clearline

Clear EVOH bag with oxygen barrier.

### nyline

Clear nylon bag with low oxygen barrier.

### polyline

Clear polyethylene bag without oxygen barrier.

## aran IBC

IBC (intermediate bulk container) is a successful logistic method that provides an attractive economical solution for the transport of tomato products, citrus and other fruits, dairy products, liquid eggs, edible oils, wine and other liquid foods in large quantities while fully protecting the packaged product. In addition this method is used for the transport of chemicals and liquid detergents. Aran offers an efficient and economical IBC solution through a range of aseptic and non-aseptic bags - packages with volumes of 300 gallons and 1,000 liters, adapted to many types of external packages (folding crates, metal containers, etc.). This is a convenient and quality solution for manufacturers who require bags adapted precisely to their transport and packaging needs in the IBC method.

## The filling process

Flexipack - a unique product by Aran - is a package that provides the customer with an inclusive solution for IBC transport. The package is comprised of three parts - a metal frame, an external polypropylene sack and an internal bag that includes one of Aran's IBC bags - silverline, clearline, nyline or polyline. The general package folds efficiently achieving convenient storage and delivery abilities prior to and after use. The result is an economical solution easy to transport and adapted exactly to customer requirements.

### Volumes

330 gallons / 1,000 liters / 1,800 liters

## Why IBC?

- > **Saving:** An attractive economical solution for packing and transport of liquid foods in large quantities.
- > **Convenience:** An inclusive solution for the customer as a complete component within the IBC method
- > **Transport:** Convenient and efficient for the transport of large quantities long distances.
- > **Protection:** Highly resistant to perforation, and when needed can be aseptic with barrier features.
- > **Environment:** less pollution, due to a saving of 70% on raw materials compared to rigid containers of the same volume.

## Why aran?

- > The world's most advanced films for the packaging of liquid food products.
- > A wide range of quality, flexible and durable packages with a variety of combined features.
- > Solutions customized to the packaged product, storage conditions, transport and unique customer requirements.

> A wide selection of supplementary accessories - taps, spouts, etc., to provide the best complete solution.

> Uncompromised product quality thanks to an excellent quality control system. ISO 9002 authorization and upholding of FDA regulations and European standards.

> An excellent customer service, high availability and personal contact. Speedy delivery including small quantities.

> Technical support for the customer and continuous professional follow up.

aran's technical department will be happy to customize a unique product in answer to your demand, in the required dimensions and adapted precisely to your requirements.
