2700	0	0.2
5000	0	1.2

The tests are performed at ASTM F392-74 standard

## **megaflex** – wine and aseptic liquid products go the distance

Aran presents the new generation of the Megaflex family – a light strong bag for haulage under difficult transportation conditions, using a relatively small quantity of raw material and thereby being more environmental friendly. Megaflex is based on heat lamination – the optimal method for packaging liquids that ensures great flexibility, improved durability to punctures and reduces the risk of flex crack during haulage. Together with improved barrier features and a commitment to high quality, Aran's megaflex laminate has become a desired product on the world market.

Under the brand name of **vinoflex**, the product provides an efficient solution to the packaging of wine and its haulage over long distances, it has been very successful on the Russian and Eastern European markets, where wine is transported overland for distances of up to 10,000 kilometers.

The bags come in grey.

Another implementation for the aseptic sector: under the name of **megasept** Aran markets small bags and 55 gallon bags for non-viscous products in the world tomato industry (pizza sauce, diced tomatoes, etc.).

The bags come in blue according to international standard requirements in the food sector.
