

## Concerning Black cumin

### What is Black cumin?

Black cumin is an annual plant that belongs to the crowfoot family and is not related to our cumin. It reaches a height of 50 cm and produces very beautiful whity or light blue blossoms, much alike to our „love-in-a-mist“.

The black seeds are three-sided and wrinkled.

Black cumin has been applied as mystic healing remedy for more than 2000 years, especially in the Mediterranean region and the Orient. When the tomb of Tut-ench-Amun was opened, a little bottle of Black cumin oil was found, obviously a funerary object.

The prophet Mohammed himself shall have said:  
„Black cumin heals any disease but death“.

# Mystic Healer from the Orient

## AMAZONAS Black cumin is unique

- Our Black cumin comes from the biggest Egyptian oasis – „El Fayoum“, what means „the vegetable garden of Cairo“. This region, which is located west of the Nile river, was a marshy landscape in former times. Today it is considered an ideal cultivation area especially for highly valuable plants like our Black cumin.
- The Egyptian Black cumin is considered the most valuable of all. Our Black cumin oil delights by a pleasant mild taste.
- The production of the oil is made by the means of a very gentle stamp-pressing-method, which preserves all its valuable substances.
- AMAZONAS Black cumin oil is of 100 % pure initial pressing. It contains a very high amount of polyunsaturated fatty acids and natural Vitamin E.

## Black cumin compared with ....

Long we have deliberated to what we could compare that extraordinary healing effect of Black cumin. And we found – it is incomparable.

Black cumin is simply special, mystic and highly effective.

## Specification

Product name:	Black cumin oil
Botanic name:	Nigella sativa L.
Country of origin:	Egypt
Made of:	100 % pure Black cumin
Cultivation:	controlled organic cultivation
Concentration (ratio):	1:1
Ingredients:	100 % pure Black cumin
Carriers:	none
Additives:	none
Colour:	yellow to greenish-brown
Taste:	characteristic
Free of:	sugar, salt, gluten, corn, lactose, milk products, synthetic preservatives, synthetic dyes and flavours, genetically modified ingredients (GMO)
Suitable for:	vegetarians, people who live on uncooked vegetables, diabetics, people who suffer from coeliac disease
Best before:	24 months
Original trading unit:	5 l can
Recommended storage:	originally packaged, dark, dry

## Production

### Cultivation

Seedtime for the Black cumin plants is september.

### Harvest

After the flower boom the plant produces seed capsules and dies off little by little from the bottom up. Harvest starts when the capsules turn brown. Ripe black cumin capsules are of matt black shimmer and shed a pleasant anise-like scent. To protect the capsules from moisture they are cut off before sunrise, meaning before morning dew or mist could condense on them. Afterwards the harvested plants are spread in big bundles on clean cotton cloths for drying, then threshed and packaged in sacks.

### Processing

After the dried seeds are cleaned in an oil mill they get cold-pressed, which is a pure mechanic process without the use of any dissolvents. This special very gentle stamp pressing method grants the preservation of all valuable substances. The result: top quality black cumin oil of initial pressing!
