

Powerful and future-proof. Our pioneering on-board solutions.

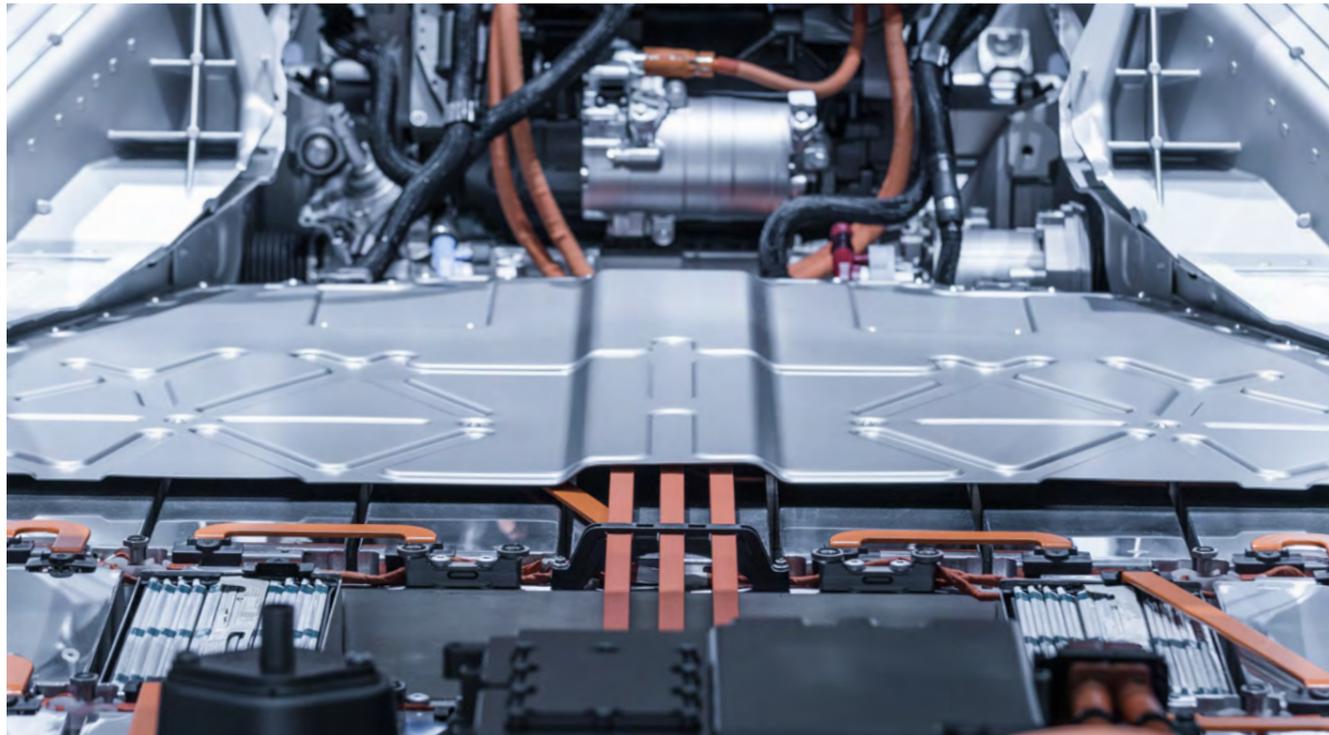

Electrical Connectors | Connections for Life

EN

MOBILITY

We enable strong connections in e-mobility

With Stäubli, you can rely on a competent partner whose know-how will always help you find an optimal solution, even for the most demanding applications. As long-standing collaborative partners in the automotive industry, we are always thinking

a few steps ahead when developing reliable connectors for future-proof mobility. We strive to outperform even the most ambitious targets with tailored solutions to suit your specific requirements.

Stäubli Group
Swiss origins with over 130 years' experience

Global Expertise
6000 employees in 28 countries

MULTILAM
Extremely durable and reliable electrical contact

On-board solutions

Electric and hybrid vehicles are key to the energy transition: By reducing the carbon footprint of every journey, they help achieve climate targets and improve the quality of life of every individual. With our comprehensive expertise and a portfolio specifically for the e-mobility sector, our components meet the most demanding requirements and deliver high performance under extreme conditions.

On-board applications require that every component provides outstanding quality, reliability and performance. Stäubli electrical connectors deliver efficiency, safety and durability – even in the harshest environments. Distinguished by their compact design and guaranteed vibration and shock resistance, they ensure permanent electrical contact thanks to our patented MULTILAM contact technology. External certifications and extensive quality testing underscore our commitment to providing the ideal connector solutions.

Moreover, our components enable more streamlined manufacturing processes and easier maintenance. The compact and clever designs eliminate the need for fasteners and special tooling, cutting down on assembly time.

E-MOBILITY

Strong and trailblazing.
Our pioneering on-board solutions.

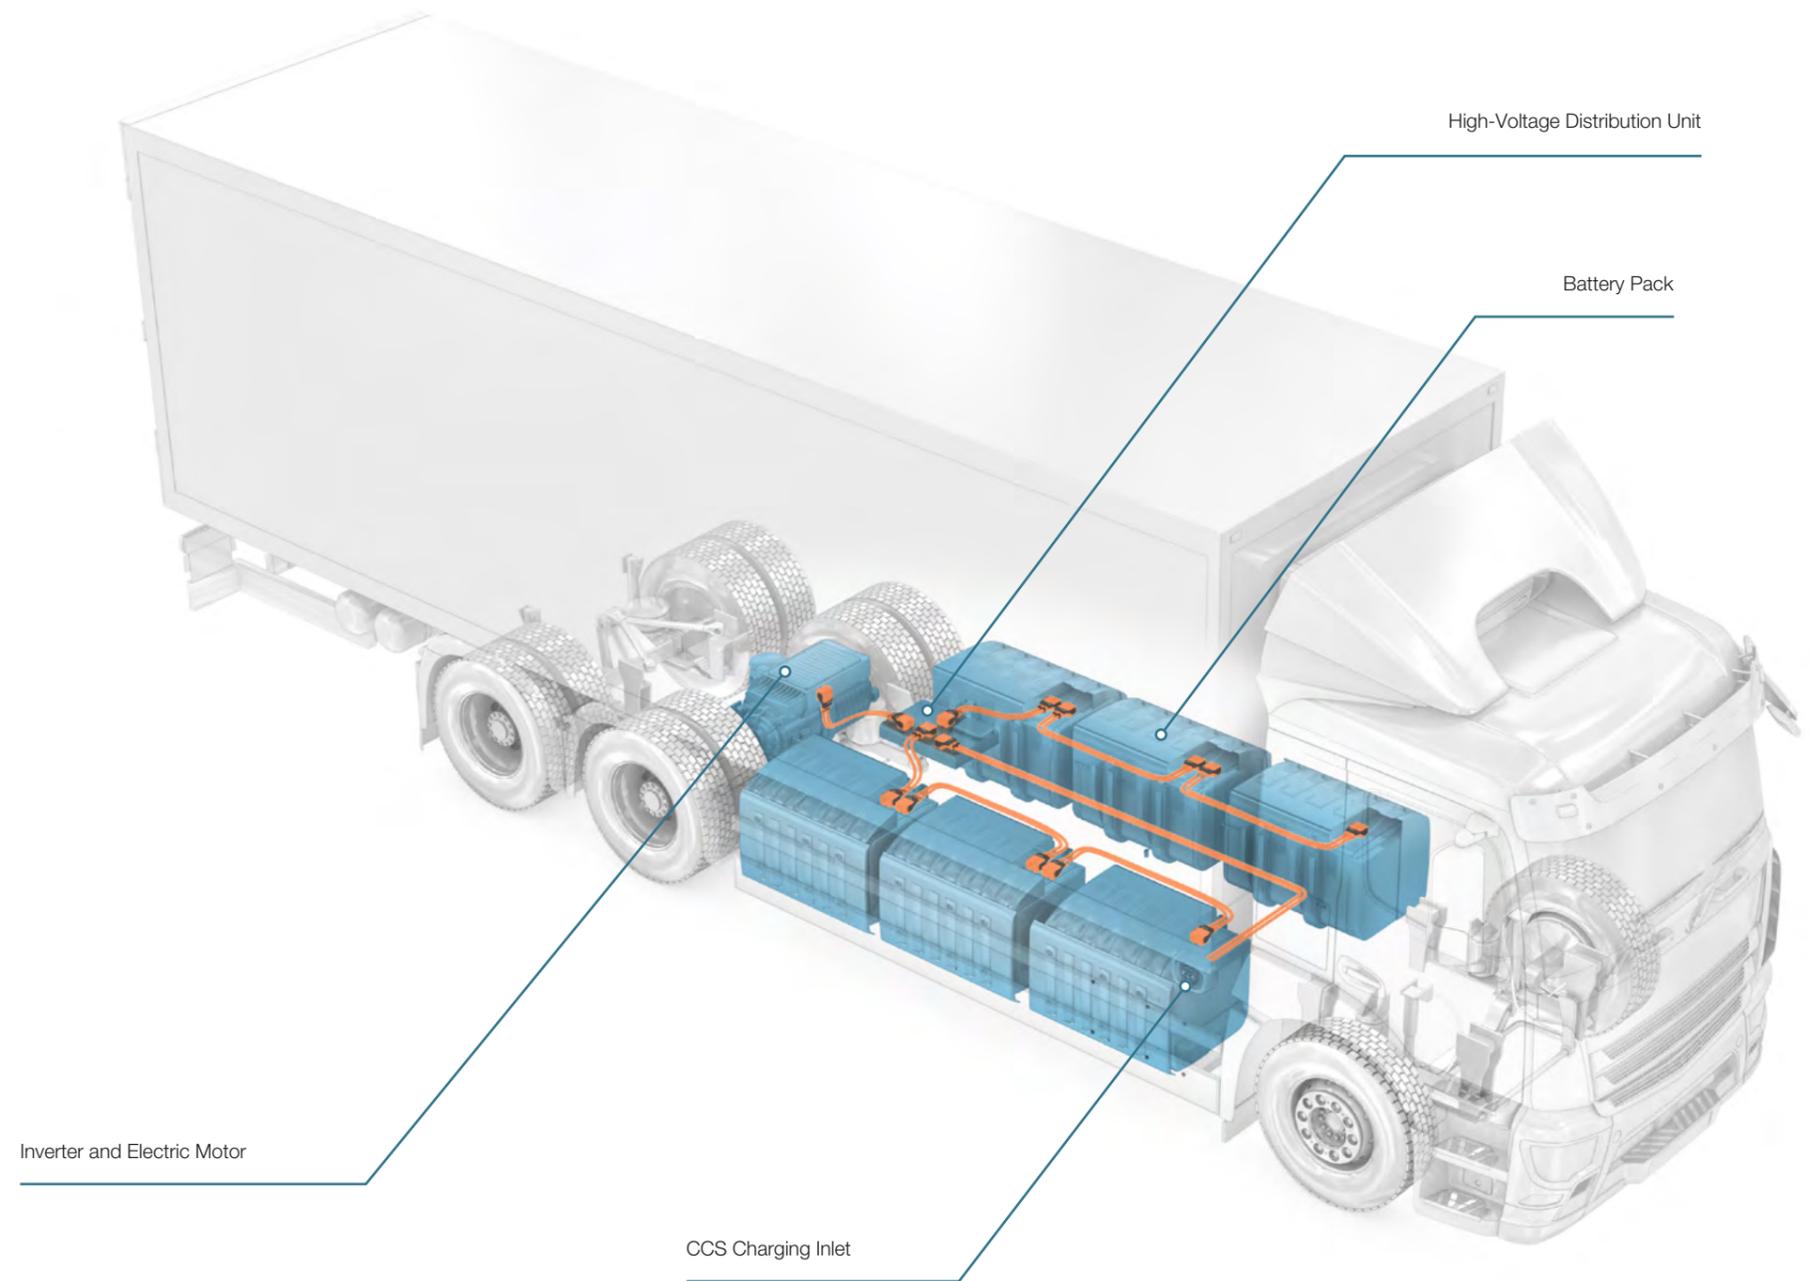

E-MOBILITY COMMERCIAL VEHICLES

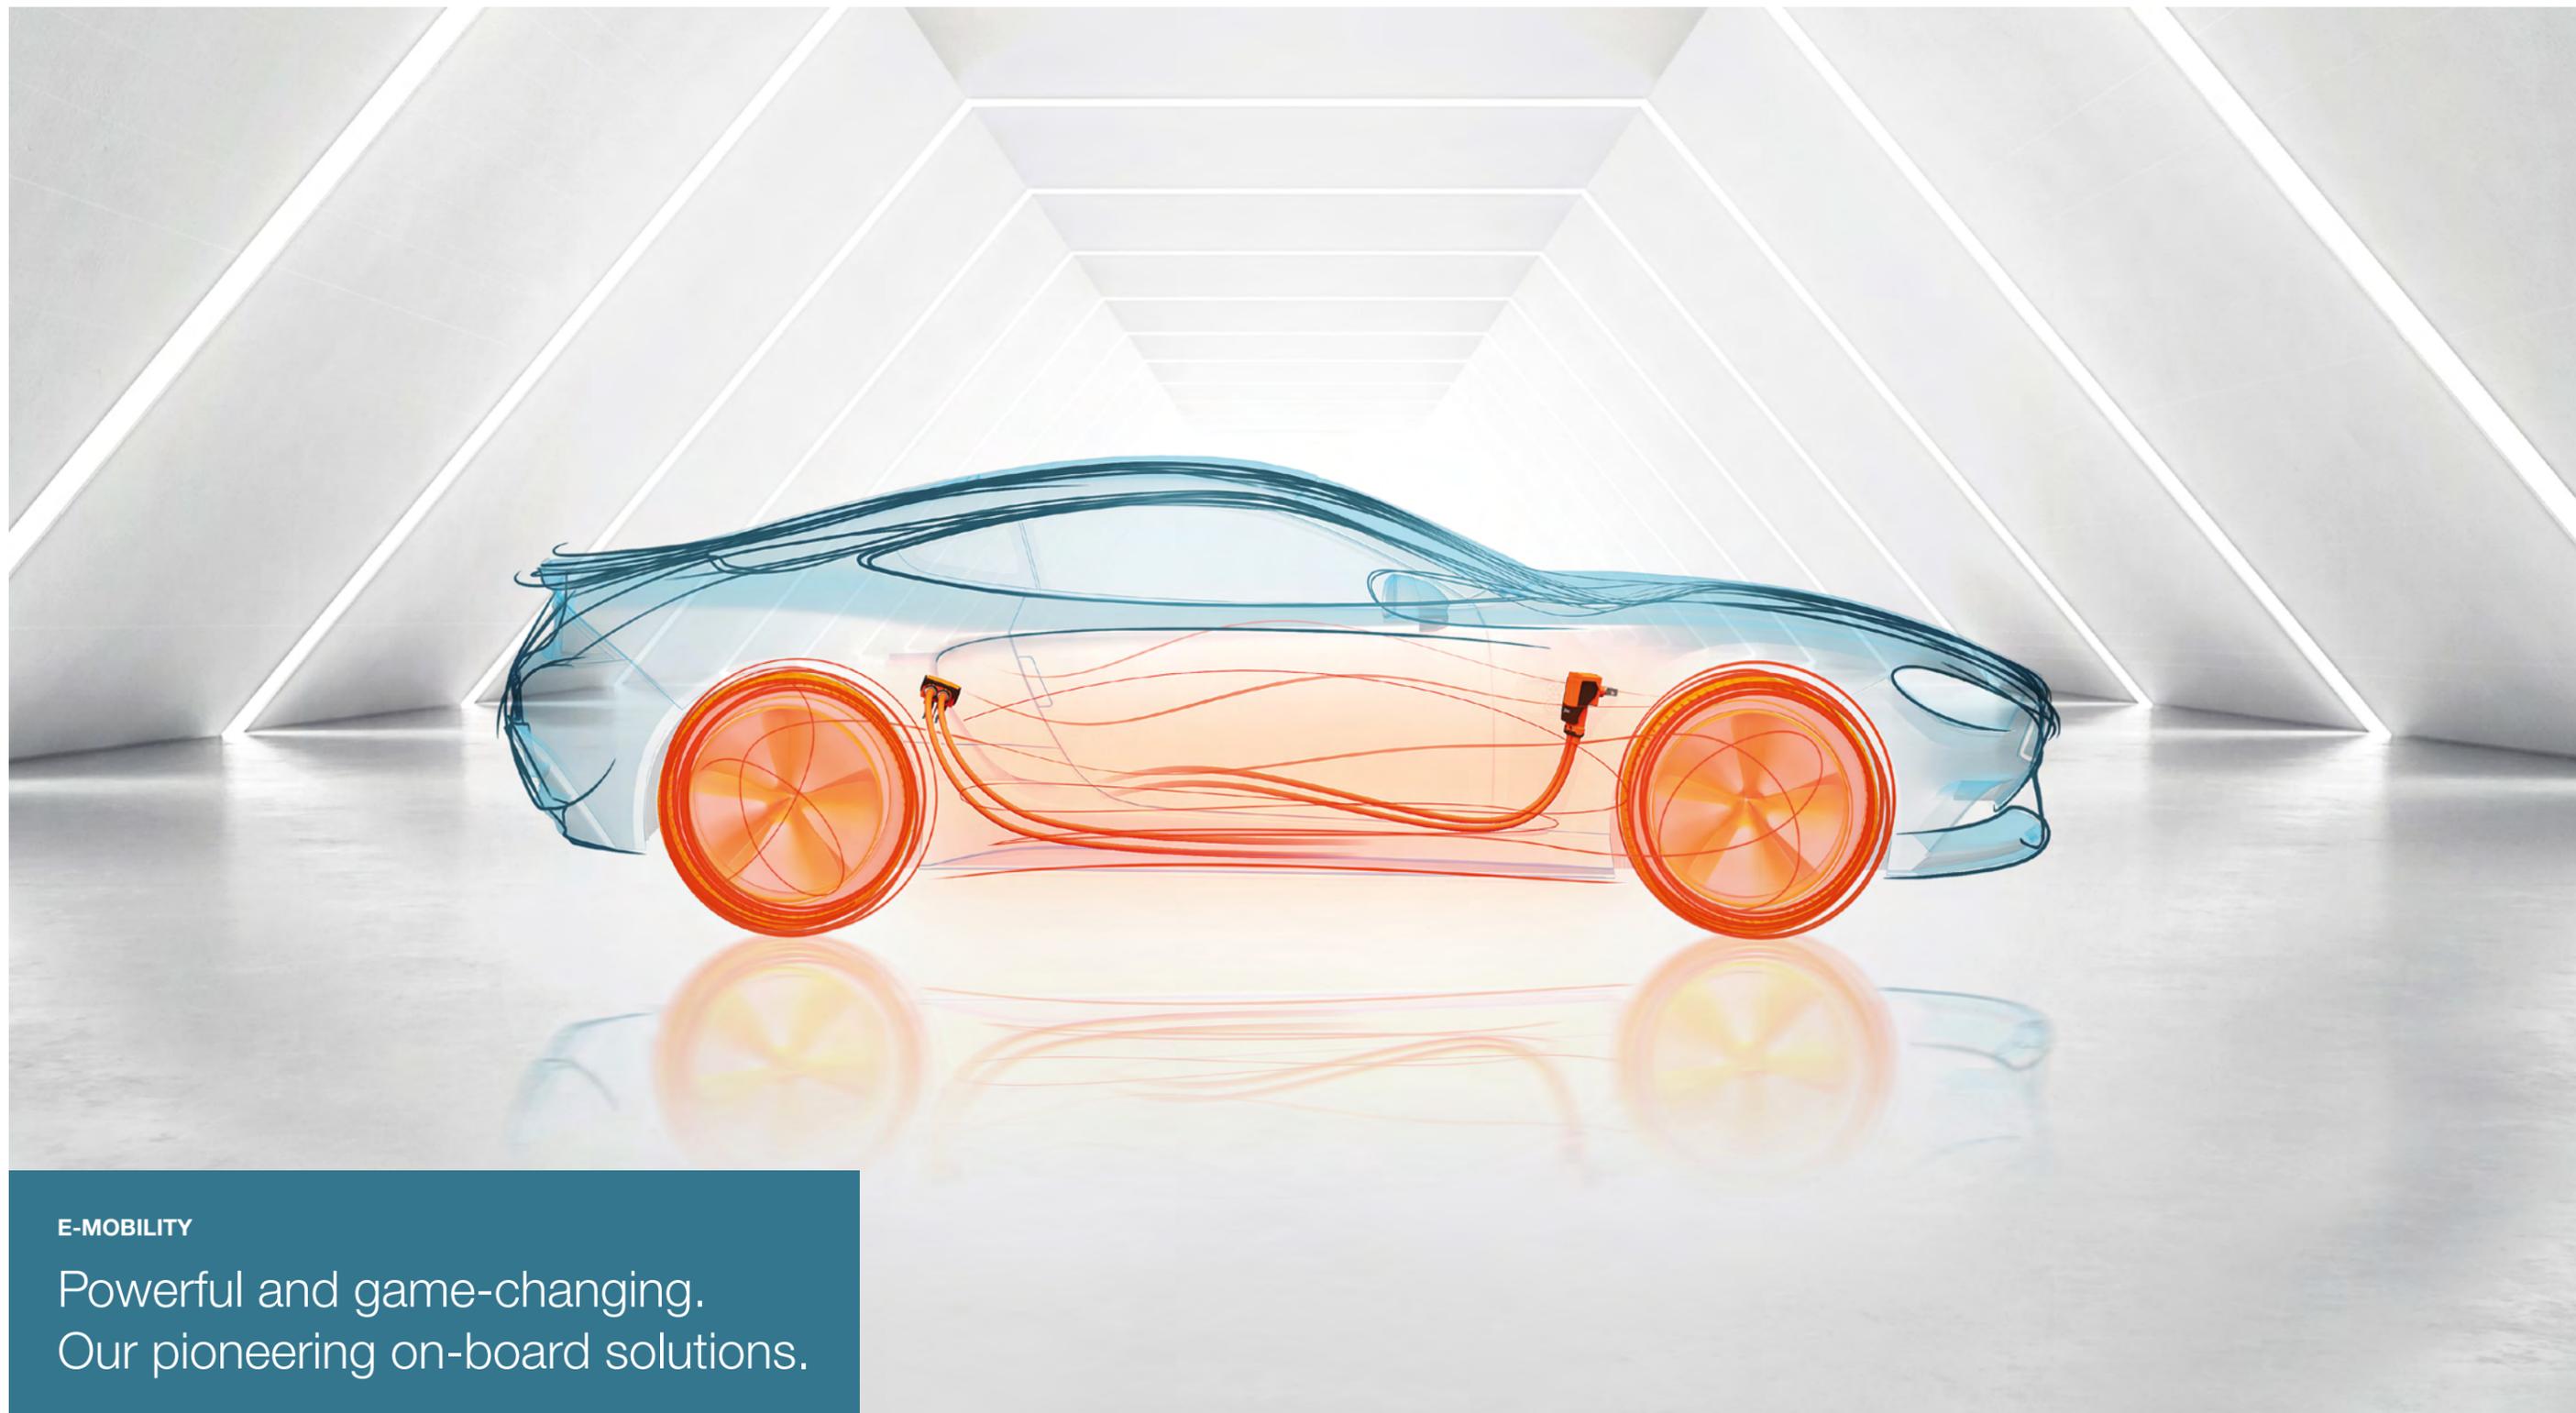

Connections that work. Reliability you can count on.

Transporting people, goods or materials from point A to point B every day? Along these routes, your electric vehicles constantly face new challenges. We help keep you on the go.

Establishing a reliable connection between high-voltage batteries, inverters and other HV devices is crucial for vehicles. Only seamless interaction along the electric powertrain enables performance that combines high efficiency, durability and suitability for everyday use.

Featuring our innovative MULTILAM contact technology, PerforMore is ideal for vehicles with busy schedules. High current carrying capacity, low contact resistance, vibration resistance and a compact design are just a few benefits our connection solutions provide. As a long-standing partner in the transportation industry, we can support you with our expertise: from consulting to customized solutions and our collaborative approach.

E-MOBILITY

Powerful and game-changing.
Our pioneering on-board solutions.

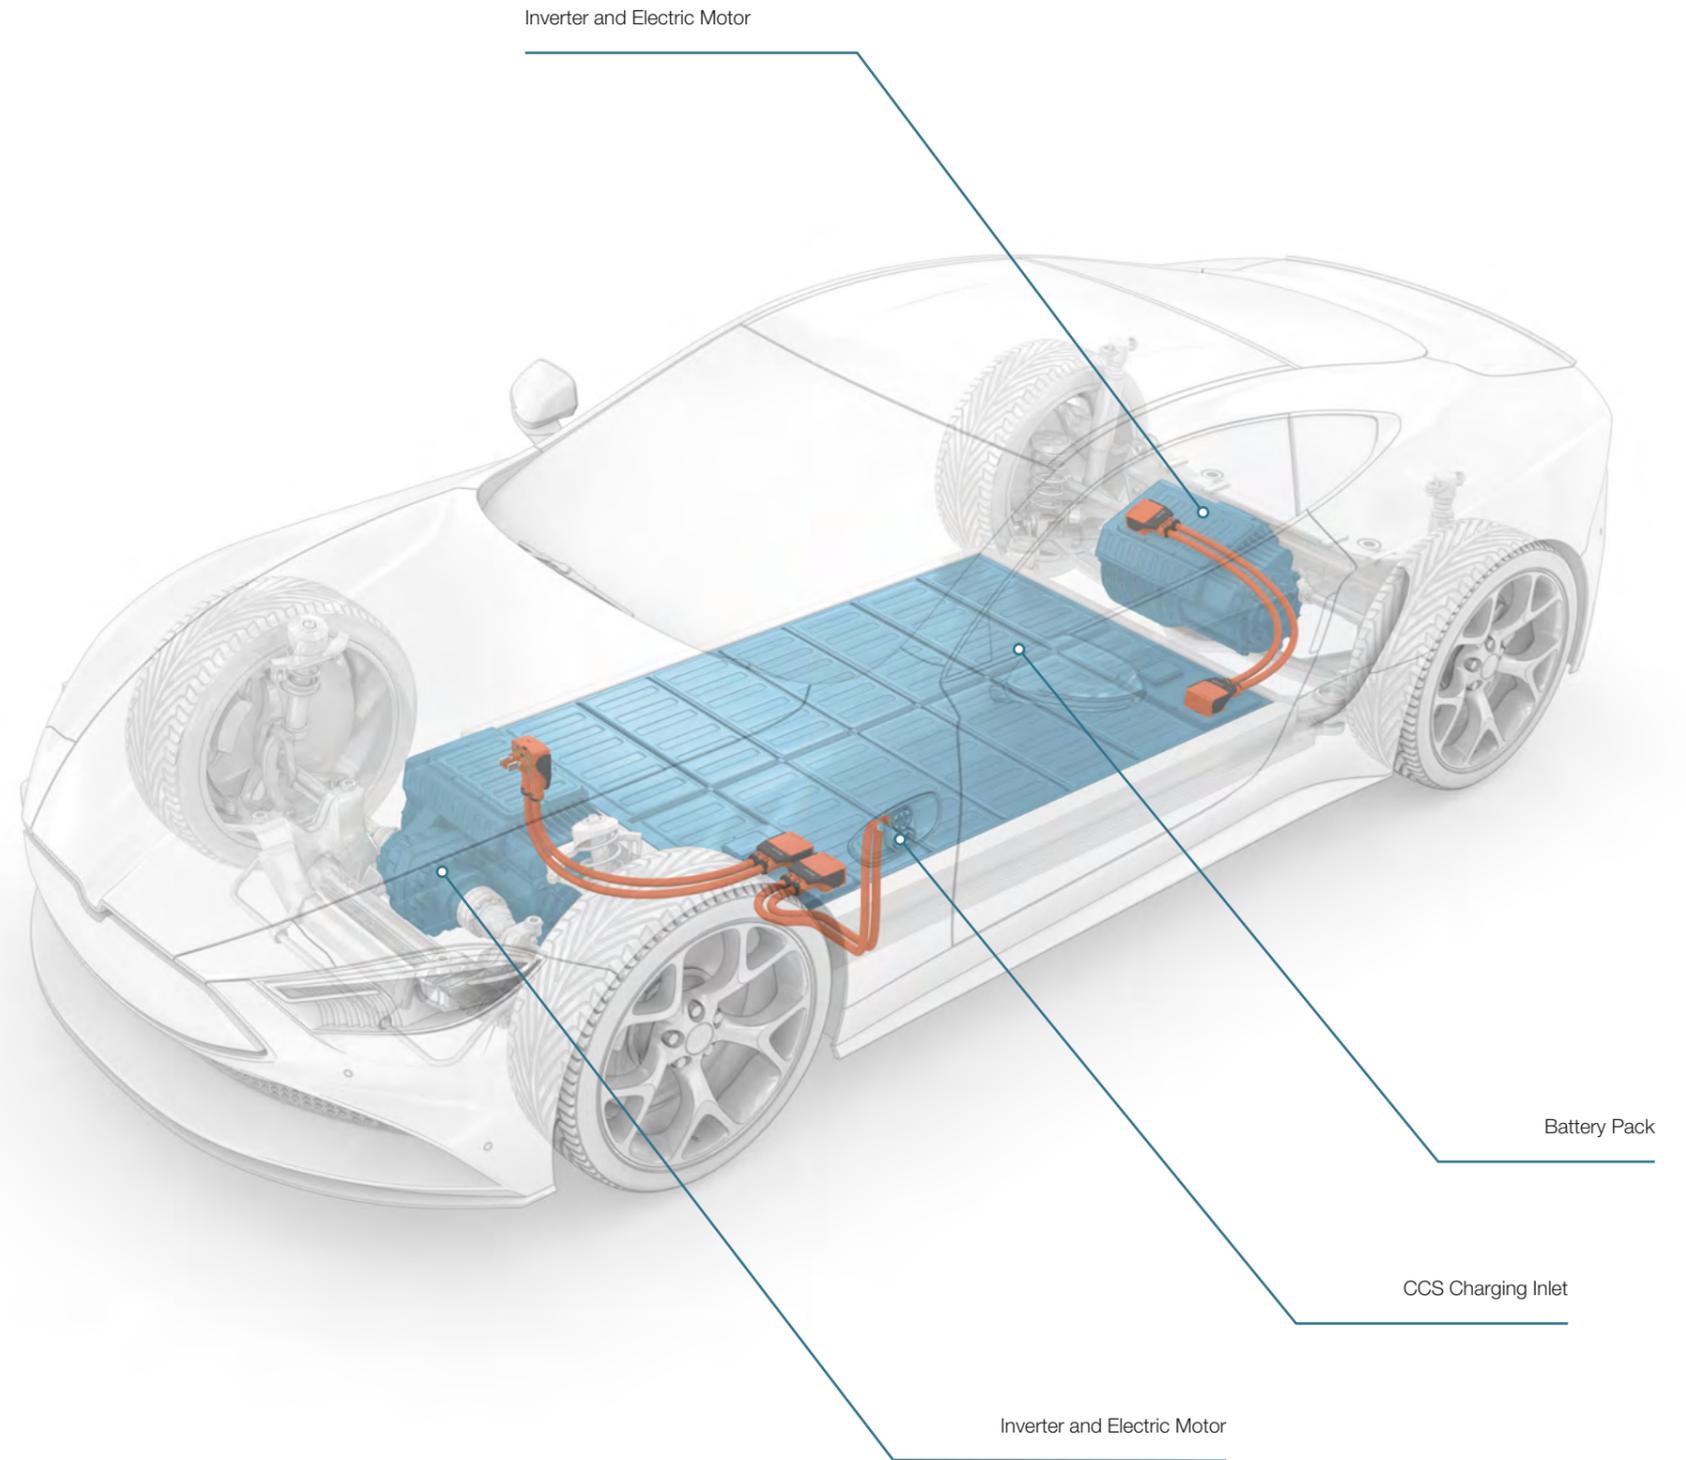

E-MOBILITY HIGH-PERFORMANCE VEHICLES

Move in the fast lane. We ensure stable power.

Achieving the goals of our e-mobility customers is the driving force behind our innovations. It's an endless quest for improving your performance and economic goals.

With expertise in high voltage systems and as long-standing partners in the automotive industry, we are always thinking a few steps ahead when developing electrical connectors. We strive to outperform even the most ambitious targets with tailored solutions to suit your specific requirements and our innovative MULTILAM contact technology.

When it comes to on-board solutions for high-performance electric vehicles, we know what counts: very high current carrying capacity with compact dimensions, maximum reliability and durability under extreme conditions, high temperature and vibration resistance, and a high-quality EMC shielding effect. After all, the pinnacle of performance is maximum performance.

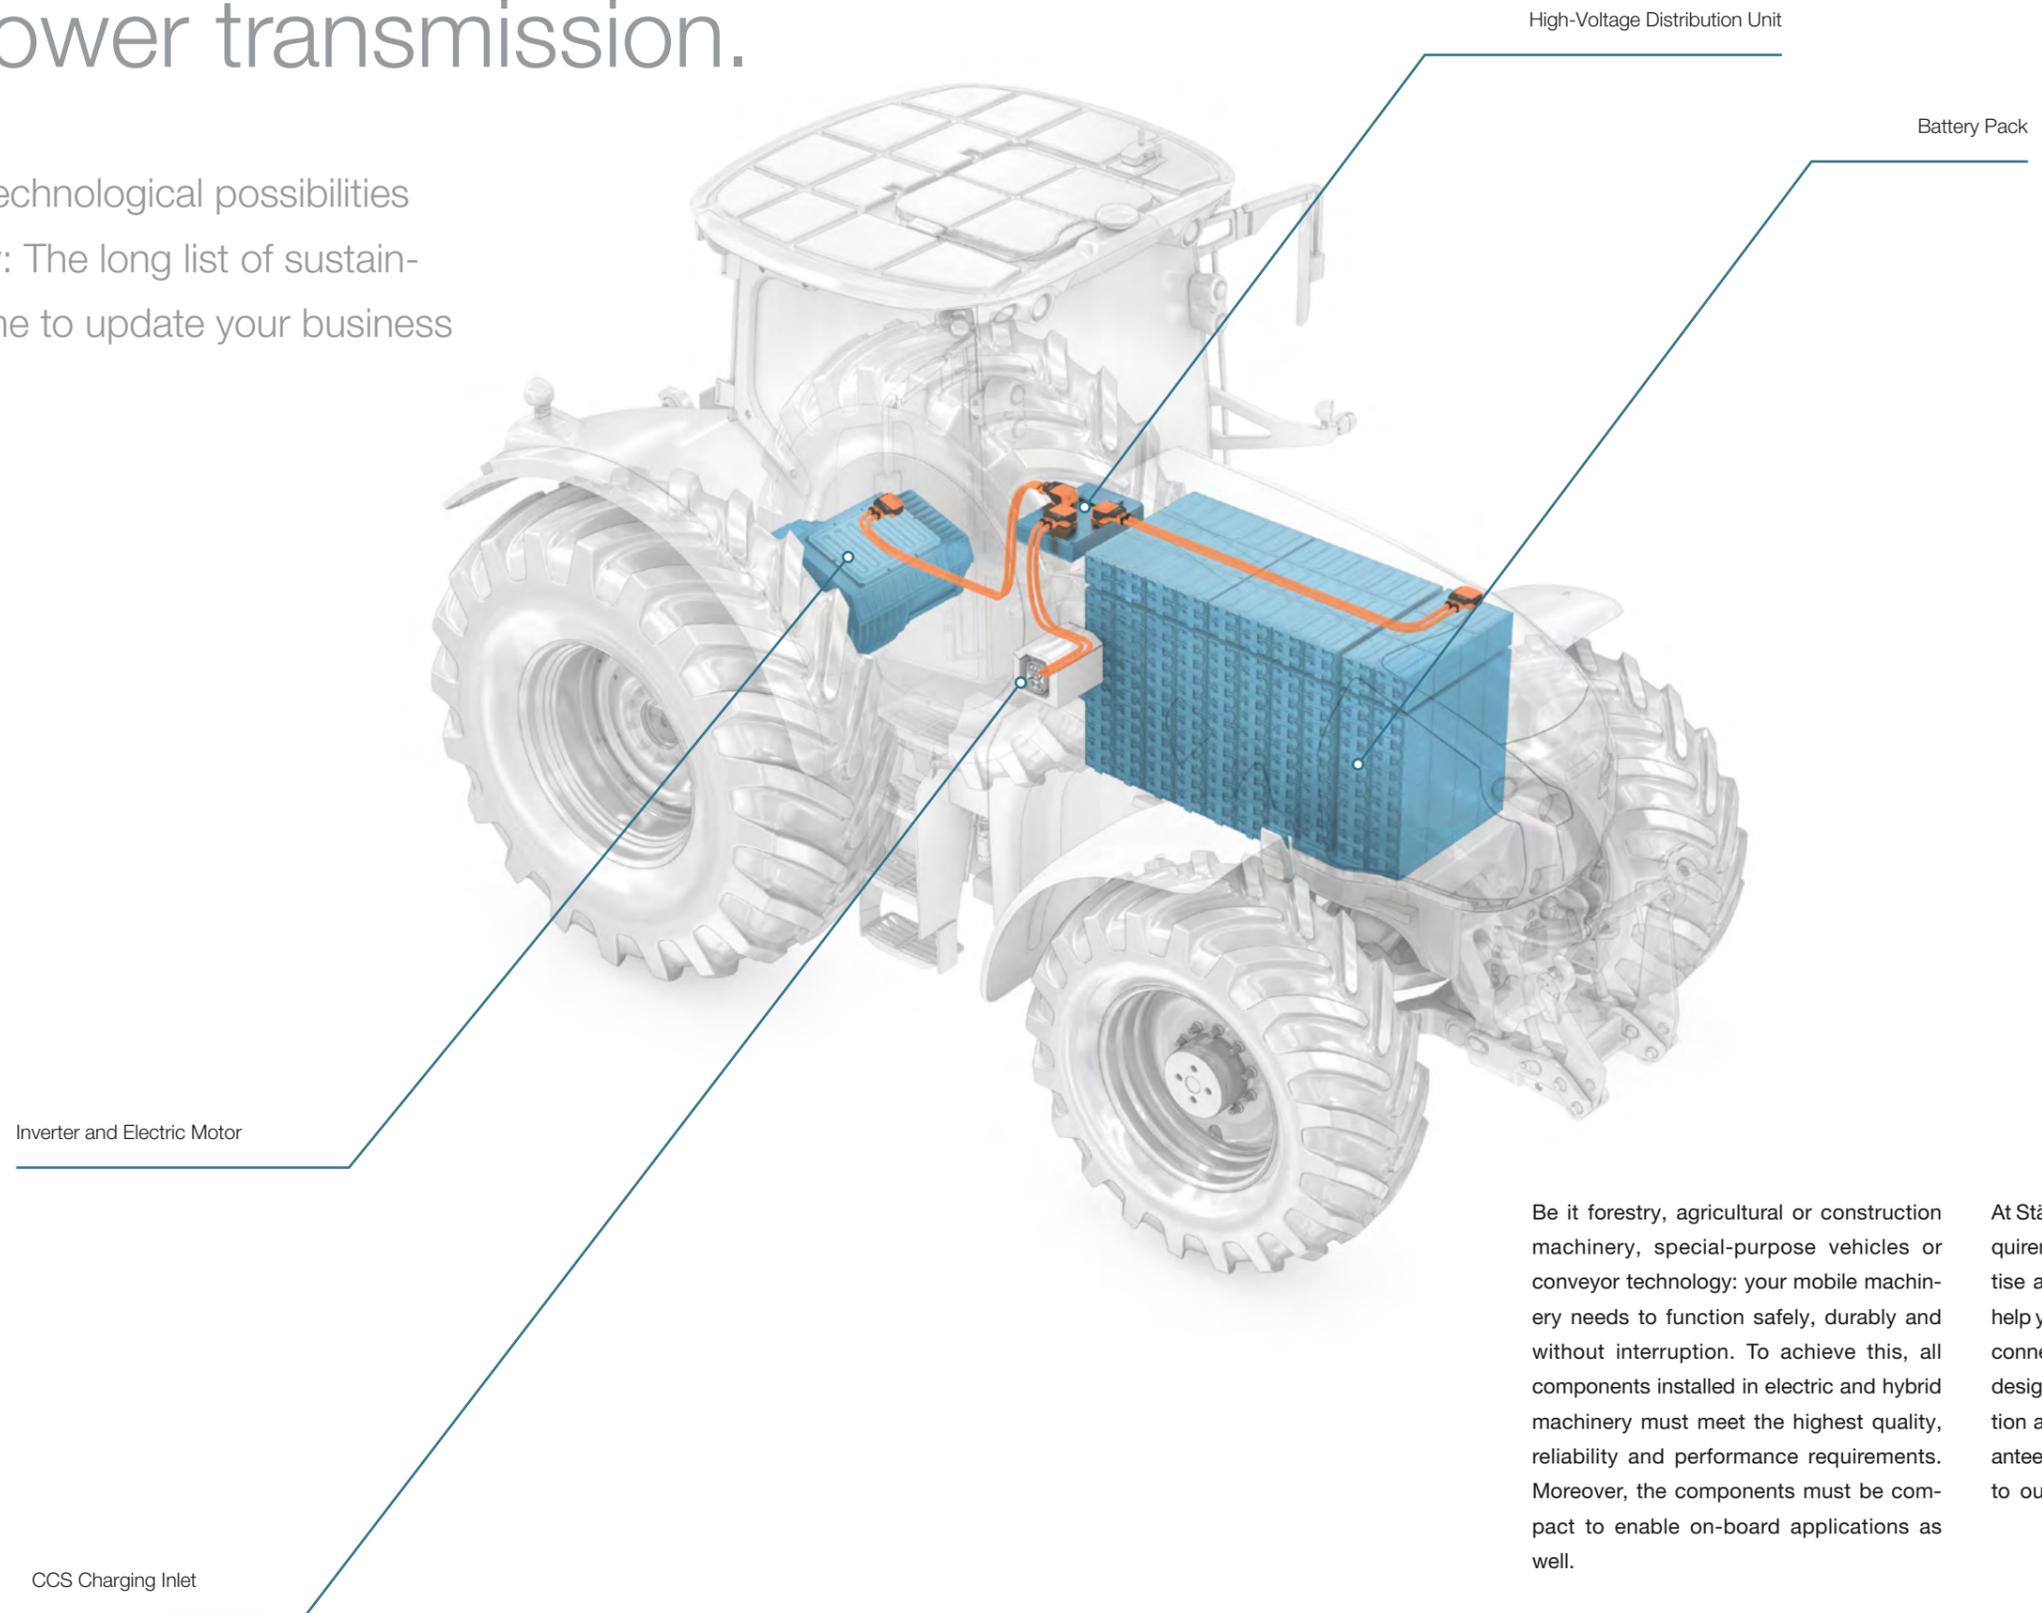

E-MOBILITY

Durable and ground-breaking.
Our pioneering on-board solutions.

E-MOBILITY MOBILE MACHINERY

New working standards. Reliable power transmission.

Energy transition, new technological possibilities and economic efficiency: The long list of sustainable reasons why it's time to update your business and mobile machines.

Be it forestry, agricultural or construction machinery, special-purpose vehicles or conveyor technology: your mobile machinery needs to function safely, durably and without interruption. To achieve this, all components installed in electric and hybrid machinery must meet the highest quality, reliability and performance requirements. Moreover, the components must be compact to enable on-board applications as well.

At Stäubli, we listen and understand your requirements. With our many years of expertise and extensive e-mobility portfolio, we help you find the ideal solution. Our electrical connectors are renowned for their compact design, high operating temperatures, vibration and shock resistance, as well as guaranteed continuous electrical contact, thanks to our innovative MULTILAM technology.

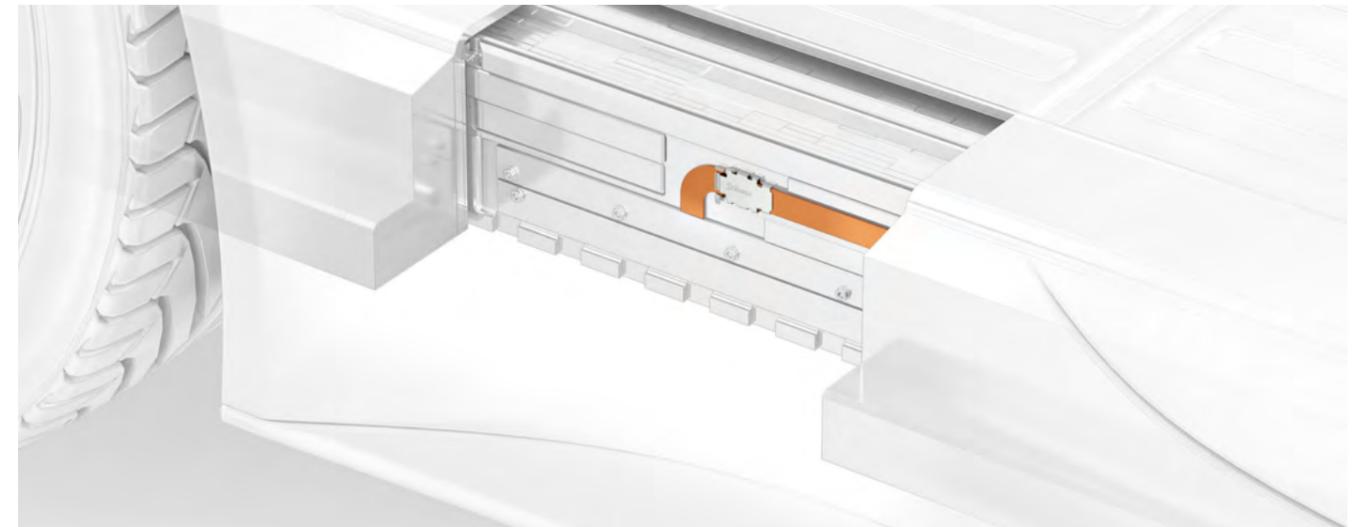

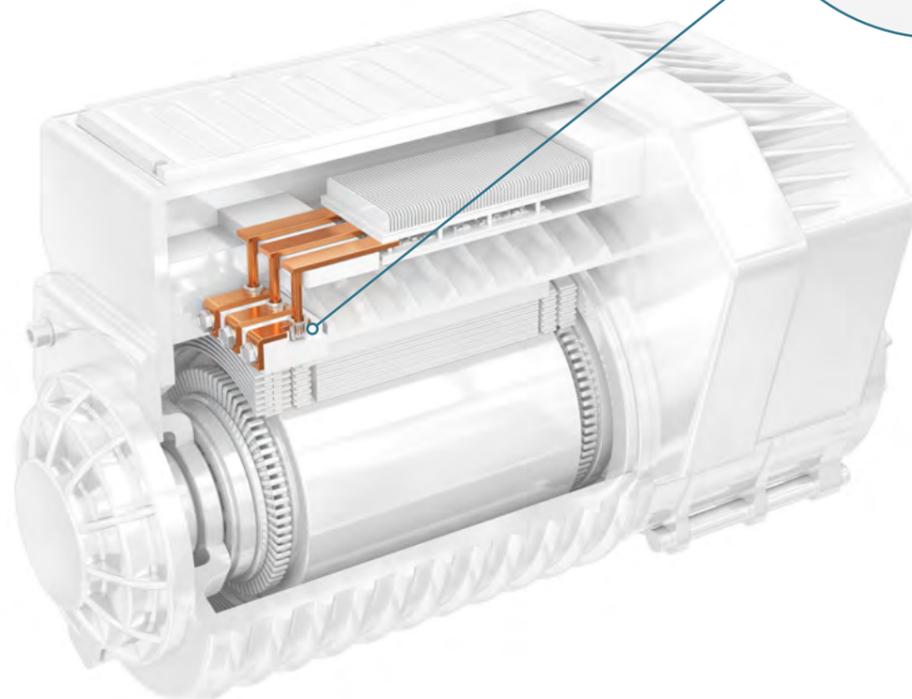

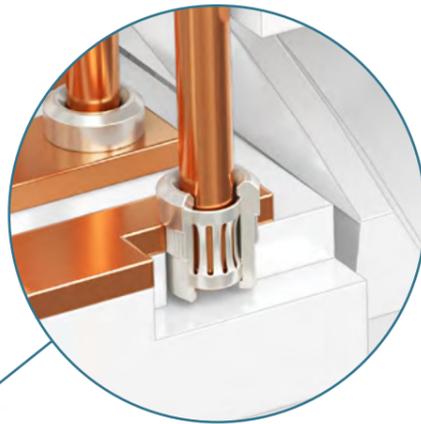

ENGINEER TO ORDER

Electrical connectors for custom specifications

Our greatest strength is that we listen and understand your e-mobility needs. Together, we develop solutions tailored to your exact requirements – even if it requires working on-site. With our expertise in pioneering contact technology, an extensive portfolio of industry-specific products, and partnership-based collaboration, we help you overcome any engineering challenge.

Whether you require a solution for a limited-edition series, standard production model or even millions of components to suit your design specifications, we are up to

the challenge. Our MULTILAM contact technology enables static and dynamic solutions that can be mated once or up to a million times. Offering an extensive range of diameter sizes, contact materials, contact surfaces, insulation materials and termination types, we work directly with your engineers to create bespoke solutions.

Crafted for excellence

Our proven MULTILAM contact technology also offers excellent performance and reliability in flat and fork-plug connectors. Thanks to a robust design, excellent material properties and specially formed contact elements, they provide high current carrying capacity and minimal contact resistance. Designs can also be modified to support the required current capacity, external shape or connection types upon request. In addition

to a premium selection of high-quality base materials, coating options and MULTILAM connector types, we also go the extra mile with labelling and tailored assembly. For complex applications, we work with you on-site to develop and test prototypes. And only once the field test phase is successfully completed to your satisfaction, we begin to roll out series production.

Every sector in e-mobility has its own unique challenges. Together with you, we develop perfectly suited solutions. Our designers and engineers enjoy developing custom connections for fluid, data, high current capacity and high frequency signals that thrive in demanding applications or harsh environments.

Various busbar connections

E-MOBILITY PERFORMORE

PerforMore: Connectors for electric powertrain systems.

Our compact two-pole connector is the ideal solution for high-power charging (HPC) systems, high-voltage batteries, inverters and high-voltage distribution units (HVDU).

PerforMore meets the stringent requirements for safety, reliability and performance in electric vehicles based on LV-215 standards. The electrical connector also features a compact design and user-friendly operation with its two-stage unlocking system.

The Ø 10 mm contact system features our proven MULTILAM technology which is ideally suited to the demanding requirements of the electric driveline – ensuring vibration resistance and high operating temperatures, among other things.

Dependent on the ambient temperature, PerforMore can transmit continuous currents of up to 600 A with minimal power loss.

EvoTrak lite: High durability metallic connectors

Originally developed for railway applications, EvoTrak lite is a leading modular connector system used across numerous industries that require reliable power transmissions for medium power applications. Thanks to its robust and versatile connection design, the series offers unparalleled contact reliability and is configured to match your needs.

E-MOBILITY COMPLEMENTARY SOLUTIONS

CombiTac: The ultimate modularity

Combining quality, modularity and field-proven designs, CombiTac delivers cost-efficient and durable connections to meet the most demanding requirements. Equipped with our innovative MULTILAM technology, the configurable and expandable CombiTac connectors enable you to plug into a world of possibilities. Ideal for a variety of applications, including

e-mobility manufacturing and testing, Modular CombiTac connectors also offer customization if you need it. The space-saving modular connector system can be easily configured online to meet your exact specifications. CombiTac guarantees high-quality connectors with a long lifetime under the most demanding mechanical and environmental conditions.

Automated charging solutions

Increasingly higher currents and faster charging possibilities. Ensuring the highest possible reliability and uninterrupted operation. The demands for electric mobile machinery in the mining, port logistics and agriculture sectors, as well as commercial

trucks and buses, are growing rapidly. With the QCC rapid charging system, Stäubli offers a flexible, safe and future-proof solution that delivers scalable power in the harshest environments.

SERVICES AND SUPPORT

Being there for you. It's our business philosophy.

Customer proximity is the foundation of our business since the very beginning. We apply this approach to everything we do – from customer collaboration to technical support and individual training. If you're looking for a dependable partner with reliable connections, we have what you need.
