Automatic grafting machine

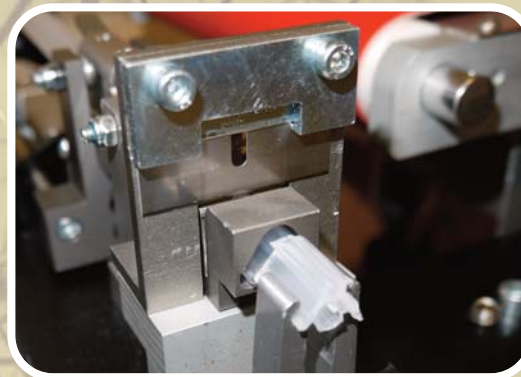

EMP-300

New grafting machine EMP-300 prepares to graft vegetables with flexible clips. Design to allow handy and efficient work, with simple mechanical and easy adjustments. The easy use allows to be used by any operator to arrange productions of 400 to 600 grafting plants per hour.

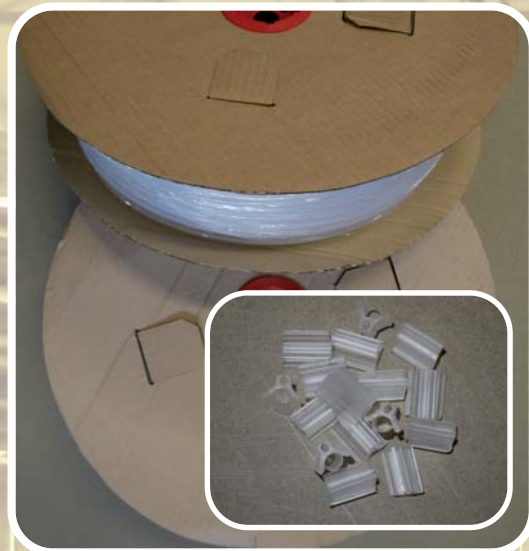

Cut unit can work with different configurations (30°-40°), and with simple adjustments different types of plants and root ball.

Clips are made of flexible material, especially design for a solid fixation. There are different measures and have a hole to hold the grafting plant.

The knives to cut the stem are very easy to change. The cutting unit can be replaced to cut with different angles.

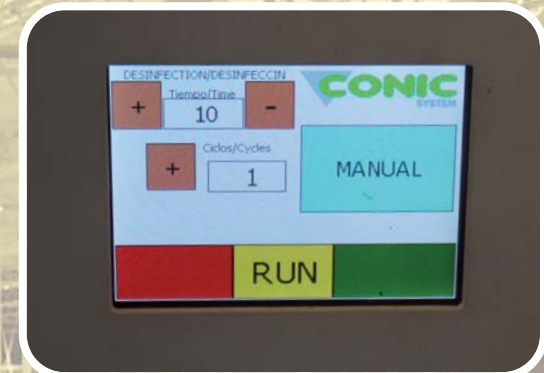

Accurate design, simple mechanical ensures maximum accuracy and reliability in every grafting plant.

Clips for grafting plants are available in different diameters, and prepares in rollers. The machine automatically supplied with the clip roller, cutting individually the clip at the grafting moment.

Cut units have disinfectant application. Disinfection cycle can be adjusted following the work patterns.
