

PEM AQUA

The quality of the electrolyte is crucial because with pemming, the electrolyte is the tool. The PEM AQUA guarantees the electrolyte's quality and thereby ensures the perfect functioning of your PECM machine. As a completely enclosed system with low space requirements, the PEM AQUA is a flexible solution for every application area.

PEMAQUA

OVERVIEW

The components, machine and electrolyte treatment are developed, thoroughly tested and manufactured by us. Our systems are guarantors for quality. Equipping that machine with exactly the number of microfilters required and the fully automatic monitoring and precise adjustments of the elektrolyte's conductivity, pH-value, chromate, content and temperature are matter of course of us. The machine and electrolyte treatment need to be optimally attuned.

IN SHORT

We do everything to ensure that our electrolytes work for you on an unfailingly high level.
