# Company

Peygran represents a group of family companies located in the industrial area of Ibi that develop and produce solutions and technical components for different industrial sectors.

We have more than 30 years experience, firstly focussed as auxiliaries working in the metal and plastic sectors. Currently, we are working with our own range of products offering unique products for professionals. We work with high quality materials and best design in order to provide our customers with effective solutions.

At present, we have more than 6,000 m<sup>2</sup> of useful area in our facilities, distributed between production areas, offices and logistics areas.

## Services under our own brand:

- Development and production of technical solutions and special components.
- Development of new products for our own brand and for third parties.
- Information on technical requirements and technical support as well as training courses on our products for architects, engineers and professionals in general.

“

## WORK WITH US

We are seeking for new points of sale for expansion and agents recommending our products and technological partners for the development of innovations and new ideas.

Visit [peygran.com](http://peygran.com) and find out more about us.

# Floats and Trowels

# GRROUTING BUCKET

NEW

## TOTAL DRAINING

Grouting bucket provided with a roller system that ensures a maximum and more efficient draining. Specially designed for cleaning and grouting in the work of laying and tiling ceramic tiles. It is made of polypropylene plastic with a capacity of 20 litres.

Thanks to the roughness, to the special design of each of the different rollers and to the disposition of the latter, a greater efficiency is obtained in the draining of the floats, saving time and, above all, efforts in these labour.

20L

Ref.	Description	Units	Units (per box)	Box (cm)	Weight (kg)	
03020300A	Grouting Bucket 20L	1	1	57x32x32	2,55	8425402089897
03020310A	Bucket Wheels	2	-	-	-	8425402089927

ERGONOMIC

## Triple Pack

The triple pack: interchangeable grip with different combinations of our three types of interchangeable sponges.

- High Absorption
- Maximum Cleaning
- Abrasion

## Model

## Characteristics

### High Absorption

Float with interchangeable sponge and ergonomic grip for finishing and cleaning surfaces with high absorption capacity.

### Maximum Cleaning

Float with replacement sponge with cuts and interchangeable. With an ergonomic grip for dragging dirt on surfaces easily.

### Abrasion

Sponge float suitable for persistent dirt on floors.

## Grouting Float

Rubber float with plastic ergonomic grip for optimum results in ceramics grouting.

# Tile X Spacers

# Tile Spacers

Tile spacers for highly resistant and precise tiling.

Products range from 1 to 10 mm.

Tile spacers are made of a highly resistant material. Also reinforced and prepared to bear heavy tiles.

Wedges for tiling, 5 and 7.5 mm high. Made of shockproof polystyrene.

Tile Spacers - Multi Series 4x

# 4x MULTI SERIES

1, 2, 3 y 5 mm  
1/32" - 3/32" - 1/8" - 3/16"

Our Multi-Series works as a set of tile spacers. We can separate in X, T or -.

Each model has 4 separation measures (1, 2, 3 and 5 mm).

Made of high quality resistant material, especially suitable for large formats and heavy slabs. This is a recoverable and reusable piece.

# Tile Spacers Peygran Box

The new Peygran Box packaging improves the product image in the stores. This new packaging optimises the display and arrangement of the product making it more visible. Stackable format to have all components tidy and sorted. The front window or the top part can be removed to have the product more visible.

The amount of bags contained varies according to the dimensions of the tile spacers.

Totem format allows us to display all the possible dimensions of tile spacers in an organised way and can be placed everywhere without using shelves.

# Levelling System

# LEVELLING SYSTEM

Peygran® levelling system ensures flatness between tiles avoiding movements during the mortar setting.

This reduces the time for the ceramic laying obtaining a perfect lippage-free finish.

A fast and 100% effective tool.

Reduces laying time

Ensures flatness between tiles and avoids movements due to mortar setting

Minimum joint less than 1mm  
Available for 1, 2 and 3 mm

Range of use: from 3 to 30 mm

## Which clip do you need? According to the tile thickness

# Clips and Wedges

## Clips for Ceramic

Clips are made of high quality material, which allows clips to be highly resistant to traction so that heavy pieces can be adjusted fast and effectively.

Clips have side cuts (patented), which allow us to remove them easily, just with a knock on the side in the joint direction, when the work is finished (mortar setting).

## Clips for Stone

Stone clips are particularly designed for granite, stone and marble. Allow us to work between 16 and 30 mm.

More resistant than the usual crosshead in order to adjust heavy formats. Between 16 and 20 mm, use it together with the special wedge-base to ensure tightening. Use the same wedge as for the ceramics crosshead.

## Wedges

Wedges have saw-shaped teeth to be adjusted to the crosshead precisely and achieve top efficiency. The wedge base is round not to damage ceramics. Wedges can be reused.

## 0,5mm Clip (1/51")

NEW

# 1,5 mm Clip

## PRESENTING A NEW CLIP!

We increase our range of clips with a 1,5 mm (3/64'') clip.

## NEW IMPROVEMENT

### IN PEYGRAN CLIPS

Better tile installation and clips removal experience thanks to the new clip design. The tiles won't be damaged.

Ref.	Description	mm(in)	Units	Units (per box)	Box (cm)	Weight (kg)

# Levelling Bracket NEW

We introduce the new complementary product to the Peygran® Levelling System: the Levelling Bracket.

It makes the tile installation easier and more precise when it comes to the 90° angle in corners, projections, lintels, etc. In addition, the new Levelling Bracket improves final results in steps. You can superimpose two pieces if you have two corners close to each other.

The Levelling Bracket has spacious gaps to facilitate the clip placing.

The thickness piece has been created for tile protection. **When using it, you have to add 4 mm to the tile thickness on your pliers scale.**

Ref.	Description	Units
03010800A	Levelling Bracket	25

# Ceramic and Stone Pliers

The main characteristic is its scale bar for the floor tile thickness (patented system). The scale bar allows us to adjust the tool to the pressure needed easily, quickly and effectively.

**Ceramic Pliers** is used between 3 and 15 mm thickness and the **Stone Pliers** between 16 and 30 mm.

Wedge-base is required for thickness between 3 and 5 mm and between 16 and 19 mm.

The parts in contact with the tile are made of plastic to avoid damages.

## Scale conversion plier

Ref.	Description	mm	Weight	Units (per box)	Box (cm)	Weight (kg)	
03010300A	Ceramic Pliers	3-15	0,23 kg	70	46x40x39	17	8425402085233

Ref.	Description	mm	Weight	Units (per box)	Box (cm)	Weight (kg)	
03010301A	Stone Pliers	16-30	0,23 kg	70	46x40x39	17	8425402085141

## Prevents injuries

- Bimaterial handle with very light padded grip..
- Mild and resistant spring: more than 400,000 tightenings.
- Easy use of the scale, easier adjustment.
- Prevents from scratching tiles.

NEW

## ERGONOMIC PLIERS

The Peygran Ergonomic Pliers for Levelling System minimises the fatigue and injuries caused by muscular overexertion during tiling and flooring works, creating perfect finishes with less time and effort.

Prevents the problems caused due to bending the wrists by aligning the rotation and push axes with the arm axes.

Peygran's R & D department has designed this tool in close collaboration with a team of health and physiotherapy professionals, carrying out ergonomic tests with the aim of minimising risk exposure to avoid occupational diseases.

Ref.	Description	mm	Weigh	Units (per box)	Box (cm)	Weight (kg)	
03010310B	Ergonomic Pliers	3-30	0,23 kg	40	59x52x41	14	8425402089941

# Wedge-base

Wedge-bases have been made to extend the functionalities of our system allowing us to work with thicknesses from 3 to 5mm. Use it in thicknesses lower than 5 mm and in thicknesses from 16 to 20mm.

Place the clips under the wedge, allowing the wedge to be centered and providing a larger support surface.

Essential in cladding as they are very delicate pieces. **When using it on the tool scale bar, add 4 mm to the piece thickness.**

Ref.	Description	Units
03010700E	Wedge-base	100

  

Bags (per box)	Box (cm)	Weight (kg)	
40	59x39x41	56,90	8425402085318

We will use it in:

**Thicknesses less than 5 mm** (with the ceramic clip).

**And thicknesses between 16 and 20 mm** (with the stone clip).

The wedge is not resting appropriately on one of the tiles.

Larger and better support surface for both tiles.

## Which clip do you need? According to the tile thickness

Ceramic thickness

 Ceramic clip + wedge-base			 Ceramic clip												 Stone clip + wedge-base			 Stone clip									

# Levelling System Protection Plate

Specially designed to protect the tiles (specially in the case of delicate ceramics and fine thickness) when using the Peygran Levelling System.

The protection plate is placed under the wedge to achieve a perfect finish, eliminating the friction in the strength of the material and converting the lateral force into vertical pressure, preventing the mortar from squeezing up through the grout joints.

Avoids delicate materials such as natural stone or glass from scratching and also avoids the premature wear of the components.

# ADVANTAGES

Ensures flatness between tiles.

## Indispensable for:

Rectified ceramics, porcelain tiling and large formats.

## Recommended for:

Marble, granite, stone and ventilated façades

Reduces laying time.

Prevents pieces from oving due to the mortar setting.

Highly useful in tiling, cladding and ventilated façades.

Recommended for formats from 30x30 cm. Indispensable for large formats.

Minimum joint lower than 1mm. Available in 0,5 - 1 - 1,5 - 2 and 3 mm thick.

Range of use: from 3 to 30 mm thick.

# HOW TO USE

## 1° SET THE PLIERS

Set the pliers to the scale according to the ceramics thickness.

## 2° PLACE THE CROSSHEAD

Spread the glue cement and then lay the first tile at the level. Introduce the clip at the ends of the tile (approx. 50mm).

## 3° INTRODUCE THE WEDGES

When laying the adjacent tiles, introduce the wedges in the clips manually.

## 4° TIGHTEN

Rest the pliers as shown in the image and tighten to the maximum to level the tiles before the glue sets.

## 5° TAP GENTLY

When the tile is levelled, we recommend hitting gently to release tensions.

## 6° ALLOW FOR SETTING

When the surface is finished, allow the glue to set for the time recommended by the manufacturer.

## 7° REMOVE THE SYSTEM

After the necessary time, remove the clips by hitting on them with a rubber mallet or with your foot in the direction of the joint (do not hit the wedges). The clip will always break by the side cuts, under the tile

Reusable

Recyclable

## 8° REUSABLE WEDGES

Finally, remove the wedges, the rest of the clip and grout the tiles.

## Tips

**If laying is not finished at the end of the working day and will be continued the following day:**

Be sure to remove the fixing material or mortar on the last row of tiles by using the base of a clip to leave a small gap to allow you to insert the clip base the following day.

The following day: fill the gaps left the day before with a trowel for edges and "fill" the back of the tile with mortar. Insert the clips and wedges and continue laying following the same process.

**Do not remove the wedges manually before breaking the system.**

The clip must be under tension to break correctly. If wedges are removed earlier, such tension will be eliminated and thus not correctly broken. If not breaking appropriately, as previously described, pull the clip with the pliers. It will break on the pre-factures and consequently, under the tile. Wedges can be reused.

**Never install the levelling system at the tile corners.**

Installation will become more difficult, tile may break if tightened at the corner, apart from being very difficult to maintain the grout joint aligned.

# Cladding Façade Anchors

# Cladding Façade Anchors

According to the present regulations, it is mandatory to wedge-base mortar-glued façades with mechanical fixing elements.

With these elements, tile detachment, as a consequence of the course of time and atmospheric agents, is avoided; the glue loses its adhesive properties.

Our safety clamps made of stainless steel are recommended as an additional safety measure against the risk of fall.

*Great resistance  
to risk of fall*

*Higher resistance  
to atmospheric  
agents*

*Allows for a  
wider range of tile  
formats mayor*

*Allows for  
great variety  
of finishes*

*Easy to install  
and light weight*

# NEW SERVICE

We offer an optional service for lacquering exposed clamps.

In this way we greatly improve the final finish of the facade as the unwanted vision of clamps on many facades, because of tones and reflections, is eliminated.

Choose the color that better matches your facade and ask for it when placing your order.

## Ask for your colour

Special colours consult +34 966 550 514

### Available lacquering

Improves the appearance of your facade merging the tone of the clamp with the tile.

# Raised Floor Pedestals

# Raised floor Pedestals

Peygran Pedestals for external use are a solution for projects in which floating, technical, raised or registrable floors are needed.

The only alternative to traditional construction methods in this type of projects in order to reduce weight and avoid architectural barriers.

Allow for high quality finish saving work and making further maintenance easier.

MODE OF USE

YouTube

## Applications

- Covers in flat roofs
- Pool edges and planking
- Covered pedestrian passages and gardens
- Raised, floating and technical floors
- Illuminated floors
- Canopies, stands, etc.

# ADVANTAGES

**1** Perfect water disposal

**2** Optimal thermal insulation

**3** Greater acoustic insulation

**4** Complete flatness of the floor

**5** Passable pavement resistant to passing

**6** Light covers

**7** Acts as an expansion joint

**8** Easy installation of pipes and wires

**9** Entirely registrable raised floor

# HOW TO USE

## 1° Place first Pedestals

Place 4 Pedestals adjusted to the tile width. Start by a corner of the perimeter to install.

Break the Pedestal flanges that hamper the appropriate tile installation.

## 2° Level the tile

Use a leveller to check the appropriate levelling of the tile on the Pedestals. Adjust the Pedestals with the floating nut until reaching the wanted height and complete levelling.

## 3° Fix the Pedestal

Tighten the locknut for fixing the Pedestal completely and avoid movements. We recommend fixing the base with polyurethane foam or similar. In this way unwanted movements are avoided.

## 4° Place the following Pedestals

Place the following Pedestals for the adjacent tiles.

We also recommend using pads to damper sound.

## 5° Compensate unevenness (Slope Regulator)

For a completely levelled surface, use a slope regulator to compensate the floor unevenness.

## 6° Lay the adjacent tiles

Lay the tiles orderly adjusting the floor to the Pedestal flanges, in this way, avoiding further spaces and movements unwanted.

## 7° Continue levelling

Continue laying the adjacent tiles using the same process until completing the surface to be covered.

## 8° Registrable surface

Finally, we obtain a completely registrable surface which allows us access to lower installations such as electrical wiring, sump, piping, etc.

# ¿How many Pedestals do you need?

Tile Format	Pedestal (Only corners)	+ Central Pedestal
450 x 450	5,8	-
500 x 500	4,4	-
600 x 600	3,2	6,1
750 x 750	2,3	4,2
900 x 900	1,7	3,1
1.000 x 1.000	1,2	2,2

Tile Format	Pedestal L<600
400 x 600	4,7
400 x 1.200	4,7
450 x 900	5,8
600 x 1.200	4,2

- Approximate quantity by the manufacturer.  
 - Repercussion for terrace of 10x10m (100m²)  
 with max. separation between pedestals of 600mm.

## PIECES

### 1 Pad

Pad made of an elastomer material which offers noise and slipping resistance.

### 2 Head

Head may of polypropylene with charges. Provided with 4 mm spacers. The thread offers resistance over 1,500 kg.

### 3 Locknut

The locknut blocks the Pedestal to avoid being loosened over time.

### 4 Floating Nut

The floating nut allows the adjustable Pedestal to be lifted or lowered without raising the tile. The nut is subject to pressure avoiding the Pedestal from being disassembled.

### 5 Bushing

Supplement to raise the adjustable Pedestal to 90mm. Can be coupled and lifted until the height wanted.

### 6 Base

Adjustable Pedestal. Water outlets to prevent from water accumulation in it. The holes on the base facilitate its fixing to the floor with polyurethane if necessary.

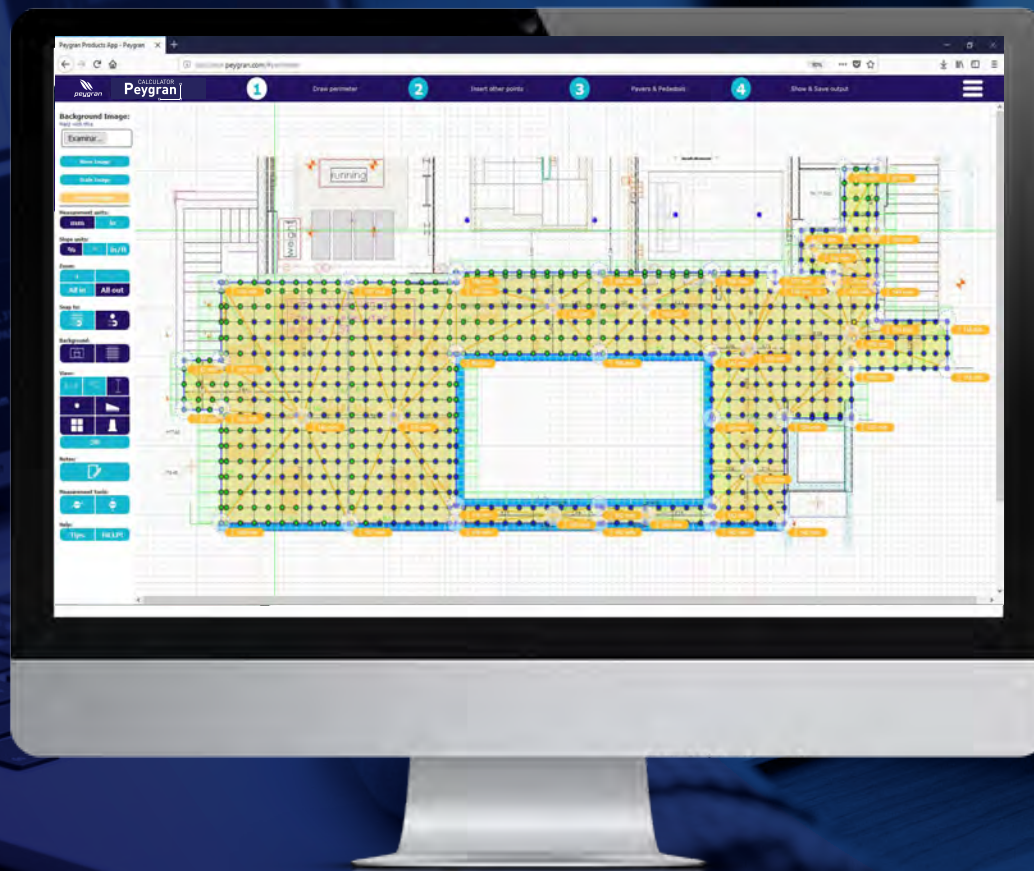

# CALCULATOR Peygran

[www.peygran.com](http://www.peygran.com)

Automatically calculate the pedestals you need.

With our Peygran Calculator software you can calculate the number and type of raised floor supports you will need for your project. You can introduce the plans or draw the surface of the building to get the calculation of the raised floor pedestals depending on the type and ceramic format, wooden decking, sinkhole and currents of the surface to be treated.

1 Create Perimeter

2 Water Spring

3 Tile Type

4 Final Result

CALCULATE  
NOW

## 1 CREATE PERIMETER

The first step is to designate the perimeter that you are going to raise with pedestals. For that purpose, you can upload your own plane to the software and use it as a template or draw it directly..

## 2 WATER SPRING

The next step is to place the drains that the installation has. The height of each point of the perimeter is fundamental to calculate the slope that is towards each sink.

## 3 TILE TYPE

Once the entire area to be installed is limited, we move to the choice of the pavement. Enter the dimensions of the tile to install. We can choose between ceramic tile or wooden flooring.

## 4 FINAL RESULT

The software automatically calculates the amount of pedestals you need for your installation and the model in each section.

The calculation can be downloaded in pdf with all necessary components disaggregated. You can save and load your projects to consult, make modifications or request a quote directly.

# Fixed Pedestals

## 10 and 15 mm Fixed Pedestals

Non-adjustable Pedestals are 10 and 15mm. Can be fitted to each other to reach the height wanted.

Compatible with pads and adjustable Pedestals. Can be fitted to the head.

Base only available without inclination. Resistance over 6,000 Kg.

### 10 Pedestal

### 15 Pedestal

Ref.	Description	mm			
			Units (per box)	Box (cm)	Weight (kg)

## Tile Joist Spacer

They are placed in the Aluminum Joist and have the function of separating the pieces of the floor that is installed on the aluminum joist structure.

Separate efficiently with a joint between tiles of 4 mm. It can separate into I, T and X.

### Tile Joist Spacer

Placed in the aluminium joist. Their function is to separate the floor effectively. Joint between tiles of 4 mm.

Ref.	Description	Units
03040131E	Tile Joist Spacer	100

## Wood Joist Head

Wooden floorboards are a very aesthetic solution for our raised floors, for which we have our head with for wooden flooring.

Specially for wooden joists projects. The finish we get with this material creates a warmer environment.

The head has a lateral support to be able to fix the joists.

Is compatible with all sp models.

## Wood Joist Head

Ref.	Description
03040100Z	Wood Joist Head

# Complements

## Slope Regulator

These wedge-shaped discs allow us to adjust inclination at the base of the Pedestal easily and quickly.

Several regulators can be coupled to obtain the currents wanted and turn them individually to orientate inclination and percentage of unevenness.

With each regulator we can obtain maximum unevenness of 2,5%.

With each regulator the Pedestal is lifted by 3 mm.

Ref.	Description	Slope
03040120Z	Slope Regulator	2,5 %

## Positions

1 Piece	2,5%	
2 Pieces	0 a 5%	
3 Pieces	0 a 7,5%	
4 Pieces	0 a 10%	

### 2 Slope regulators rotating 0 - 5%

0 - 1 - 2 - 3 - 4 - 5 % Slope

When several pieces are combined we can get all the inclination percentages lower than the maximum slope. We use several regulators to find the exact inclination. Each tab that we rotate to the regulator we add 0,25° of inclination.

NEW

# Slab Spacer

4 mm Spacer for ceramic tiles. Designed for installing floors directly over gravel, sand and grass. Thanks to its spacers and base, allows a more stable and homogeneous finish.

The piece has different nerves to facilitate modification, according to the needs of the installation. 2,5 mm thickness; can be locked with our polyamide screws.

Ref.	Description	mm	Units	Units (per box)	Box (cm)	Weight (kg)
03030101B	Slab Spacer	4	50	-	-	-
03030400B	Screw	130	50	50	-	-
03030410B	Screw	80	50	50	-	-
03030420B	Screw	45	50	50	-	-

## Head Without Flanges

Head used as a support of elements without gaps or joints between pieces. Product upon request. Consult availability.

Ref.	Description
03040101Z	Head Without Flanges

**Central Pedestal**  
recommended for  
tiles from **60x60cm**

## Head Joint 2mm/3mm

We offer two supplementary models for heads without flanges for finishes with different joints.

Ref.	Description
03040102Z	Head Joint 2 mm
03040103Z	Head Joint 3 mm

2 mm Joint

3 mm Joint

## Pedestal Pad

Pads offer acoustic insulation and slip resistance. Can be cut into pieces through the existing pre-cuts to chock. 2.5 mm thick, made of elastomer material. It has 2 flanges that prevent dislocation in heads without flanges.

Ref.	Description
03040121Z	Pedestal Pad

## Use of insulated tile

Do not support tiles with insulation on pedestals directly. The use of tiles with attached insulation supported on pedestals is not very efficient since the open joint between tiles causes the ventilation of the chamber rendering the insulation useless. XPS-type insulation undergoes short-term deformation and increases in the long term. We recommend to cut the corner of the insulation guaranteeing the correct rigid support of the tile on the pedestal, thus avoiding the deformation of the insulation.

## Perimeter Dilator

Works as an expansion joint in the entire perimeter of the installation of raised floors.

Ref.	Description
------	-------------

03040133Z	Perimeter Dilator
-----------	-------------------

## Vertical Closing

Allows us to complete the finish of raised floors that have no walls around the entire perimeter. It is also used for producing steps at different heights within a composition.

One closing is hooked to the Pedestal at the bottom and the other one at the top. For corners, put 2 at the head and 2 at the base perpendicularly.

With the base, the Pedestal does not loose strength or tilts due to the bottom sheet.

**Includes:** *top sheet, bottom sheet and base*

Ref.	Description
------	-------------

03040134Z	Vertical Closing
-----------	------------------

With base for closing

The bottom sheet fits perfectly to the base for vertical closing. In this way, the entire base of the Pedestal is supported correctly and has no reduction in resistance.

If the Pedestal tilts, it loses the base support and therefore, it loses resistance and wears.

## Locknut

The locknut blocks the Pedestal to avoid being loosen over time due to vibrations or adverse weather conditions.

**1°** Insert the locknut in the Pedestal head, at the top of the thread.

**2°** When the floor is levelled and the Pedestal has its final position, take it to the bottom to block the Pedestal.

Ref.	Description
------	-------------

03040110Z	Locknut
-----------	---------

## Wrench for Locknuts

Wrench for tightening the locknut against the Pedestal nut. Made of the same material as the Pedestals.

Ref.	Description
------	-------------

03040111Z	Wrench for Locknuts
-----------	---------------------

## Wedge for Technical Floors

Wedges for chocking technical floors. Shoulders on the wedge help fixing to the support. Made of polypropylene. Measures: 5.5mm high and 45,75mm long. Point 0.3 mm.

Ref.	Description
------	-------------

03040122N	Wedge for technical floor
-----------	---------------------------

Units	Bags (per box)	Box (cm)	Weight (kg)
1.000	20	27x18x16	22

## Slab Lifter

Allows us to remove the floor efficiently and without effort. It avoids damaging the pieces. Opening 400-600mm. 30kg Maximum.

Ref.	Description
------	-------------

03040150Z	Slab Lifter
-----------	-------------

# NFC Deck

## NFC Deck

Our laminate flooring slat is a versatile product, the NFC (Natural Fiber Composite) Deck is the ecological evolution of the WPC.

Composed of 50% vegetable fibers (rice husk); not from deforestation, but from the by-products of grain growing.

It is 100% recyclable as well as being an eco-sustainable alternative to tropical wood, which helps improve the environment.

## 100% Recyclable

The Peygran slat is made of a compound that does not contain any product harmful to the environment.

# Benefits

Due to its characteristics, this product was conceived for outdoor use: corridors, terraces, balconies, gardens, pedestrian walkways, pontoons of marinas, façades, jacuzzis, pedestals for bathing, swimming pools, etc.

It has a resistance to inclement weather (water, sun, snow, saltpetre...) much higher than the wooden deck. The benefits of the composite flooring are remarkable, since it obtains the virtues of both vegetable fibers and plastic materials.

It has a degree of thermal insulation very effective in situations of high and low temperatures. It also resists wear and corrosion caused by fungi and insects. It does not splinter, it does not absorb water and it does not get corrupted.

# Aluminium Joist

Peygran Pedestals for outside spaces with head for Aluminium Joist are the ideal solution for projects in which wood, NFC or WPC floating platforms are installed.

They are an excellent alternative to other traditional methods allowing for greater versatility when making the joist frame, thanks to the rotating clip of the joist head.

New clip for joists. They are inserted into flat heads easily to anchor the Pedestal to the Aluminium Joist.

Simply press the joist on the clip and it will be safely anchored to it.

The clip for joists can turn 360° to fit the joist to the degrees wanted in order to make a solid aluminium frame.

## Aluminium Joist

Aluminium Joists make assembly of raised platforms easy.

Ref.	Description
03040140Z	2m Aluminium Joist
03040141Z	2m Raw Aluminium Joist

## Joist Clip

Fixes the laminated floor to the Aluminium Joist safely and effectively without the need to screw all the pieces.

Ref.	Description	Units
03040132E	Joist Clip	100

## Head Without Flanges

Head used as a support of elements without gaps or joints between pieces. Product upon request. Consult availability.

Ref.	Description
03040101Z	Head Without Flanges

# PIECES

## Peygran Deck

Our laminated flooring slat is a versatile product, the NFC (Natural Fiber Composite) Deck is the ecological evolution of the WPC. Composed of 50% vegetable fibers (rice husk); not from deforestation, but from the by-products of grain growing. It is 100% recyclable.

## Fast Decking Anchor

Fixes the laminated floor to the aluminium joist safely and effectively without the need to screw all the pieces. Joint between slats of 4 mm.

Ref.	Description	Units
03040306E	Fast Decking Anchor	100

## Steel Decking Anchor

Fixes the laminated floor permanently to the joist. It is necessary to screw it. Board between slats of 6 mm

Ref.	Description	Units
03040304A	Steel Decking Anchor	25

## Start Decking Anchor

It works as fastening of the slats placed in the perimeter of the installation. It is necessary to screw it.

Ref.	Description	Units
03040305A	Start Decking Anchor	25

## Anchor Deck Registration 4mm

It allows the subsequent disassembly of Deck slats. Install the Registration Anchor along one side of the slat, to create a record on your terrace.

To disassemble the slat, rotate the registration anchors a quarter turn with a flat blade screwdriver.

Ref.	Description	Units
03040308E	Anchor Deck Registration 4mm	100

## Bracket Joist Assembly 50

Allows the joining of battens at 90°. Its use is essential for the correct assembly of the slat support substructure. Its geometry allows to fit the brackets in the lateral grooves of the battens. They must be fixed with screws type DIN 7504-P 4.2X25 - A2 or similar. The perpendicular profile assemblies can be made without joint.

Ref.	Description
03040304A	Square Assembly Joist 50

## Fishplate Joist Assembly 50

The Assembly Plate allows the joining of joists arranged in a continuous way. The fishplates allow to restrict the movements of the joists allowing the dilation of these. They must be fixed with screws type DIN 7504-P 4.2X25 - A2 or similar. A 5 mm expansion joint between profiles must be respected.
