L'AZIENDA

La FIRA è stata fondata nel 1967 come azienda per la produzione di radiatori da impiegarsi su veicoli industriali, agricoli ed automobilistici prodotti nell'area Emilia.

In seguito, per soddisfare le esigenze tecniche sempre crescenti della clientela si è stata sviluppata anche la produzione di scambiatori di calore per olio richiesti dagli impianti presenti sulle macchine. Nel 1987 la FIRA è entrata a far parte della Bondioli & Pavesi, un importante gruppo leader nel settore della trasmissione di potenza. Questo ha garantito all'Azienda una presenza sui mercati internazionali e ha dato la possibilità di affrontare e risolvere problematiche per la clientela di tutto il mondo.

Nella conseguente fase di investimenti atti a sviluppare nuove soluzioni produttive, la FIRA si è evoluta tecnologicamente con particolare attenzione alla qualità dei prodotti forniti.

PRODOTTI

La FIRA propone una gamma di prodotti che si sviluppa su tre linee:

- Radiatori acqua aria destinati a vari settori di utilizzo quali trattori agricoli, piccole auto e in genere forniture al primo impianto.
- Scambiatori di calore standard olio aria in alluminio completi di elettroventole a 12, 24 ,220 o 380 volt oppure completi di motore idraulico e ventola destinati a tutte le applicazioni oleodinamiche.
- Radiatori combinati acqua olio e intercooler destinati a macchine industriali mobili quali pale, escavatori, terne, gru semoventi, portacontainers, macchine edili e stradali ecc.

THE COMPANY

FIRA was founded in 1967 as a manufacturer of radiators for industrial, agricultural and automotive vehicles made in Emilia, northern Italy.

In response to growing user demands, the firm's area of specialisation was soon extended to embrace a production programme of oil to air heat exchangers for vehicle hydraulic systems.

In 1987 FIRA was incorporated by Bondioli & Pavesi, a major international group in the power transmission sector. This guaranteed the firm outlets on international markets and gave it access to the resources needed to solve clients' problems all over the world.

During subsequent investments to support new production solutions, FIRA concentrated on developing its technological resources, placing considerable emphasis on end-product quality.

PRODUCTS

FIRA's production programme is articulated in three basic lines:

- Air to water radiators for various application sectors including agricultural tractors, 'city cars' and small vehicles and supplies to original equipment manufacturers in general.
- Standard oil to air heat exchangers made of aluminium complete with 12, 24, 220 and 380 volt electric fan units or with hydraulic motors and fans designed for use with the broadest possible range of hydraulic systems.
- Combined water to oil radiators and intercoolers for moving industrial machines including excavators, backhoes, self-propelled cranes, container handlers and building construction / road construction machinery.

UNTERNEHMENSENTWICKLUNG

Das Unternehmen FIRA wurde 1967 gegründet und fertigt seither Kühlere für industriell und landwirtschaftlich genutzte Fahrzeuge sowie Automobile, die in der italienischen Region Emilia produziert werden.

Um den kontinuierlich steigenden technischen Anforderungen der Kundschaft gerecht zu werden, wurde anschließend die Produktion auf Wärmetauscher für Öl der in Maschinen und Fahrzeugen installierten Anlagen ausgeweitet.

Im Jahr 1987 schloß sich FIRA der Firma Bondioli & Pavesi, einer großen, im Sektor Kraftübertragung führenden Firmengruppe an, wodurch dem Unternehmen der Weg zu internationalen Märkten geöffnet und die Möglichkeit gegeben wurde, Lösungen für Problemstellungen von Kunden aus aller Welt auszuarbeiten.

In den folgenden Jahren, die sich durch umfassende Investitionen für neue Lösungen in der Produktion auszeichnen, hat FIRA technologisch einen großen Fortschritt erfahren, wobei insbesondere der Produktqualität ein besonderer Stellenwert zugemessen wurde.

PRODUKTPALETTE

Die FIRA-Produktpalette lässt sich folgendermaßen unterteilen:

- Wasser-Luft-Kühler für verschiedene Sektoren wie landwirtschaftlich genutzte Traktoren, Kleinwagen, auch als Zulieferteile für Originalanlagen im allgemeinen.
- Standard-Öl-Luft-Wärmetauscher aus Aluminium mit Elektrolüftern von 12, 24, 220 oder 380 Volt bzw. komplett mit Hydraulikmotor und Lüfter für sämtliche hydraulische Anwendungen.
- Kombinierte Wasser-Öl-Kühler und Intercooler für unterschiedliche Nutzfahrzeuge wie Schaufellader, Bagger, kombinierte Traktoren-Bagger, Selbstfahrräume, Containerfahrzeuge, Fahrzeuge für Hoch- und Tiefbau etc.

INTRODUZIONE INTRODUCTION EINLEITUNG

PERSONALIZZAZIONE

Alla FIRA ogni cliente ed ogni esigenza sono considerate nella loro unicità. Per questo in primo luogo valutiamo attentamente ogni richiesta e poi ne delineamo le possibili soluzioni. E' con questa metodologia affermata giorno dopo giorno nella realizzazione di prodotti mirati alle necessità della clientela, che l'Azienda ha formato i propri collaboratori creando un forte patrimonio tecnologico.

ISTRUZIONI GENERALI DI IMPIEGO

Gli scambiatori di calore FIRAsono costruiti in lega di alluminio e saldobrastrati, un processo produttivo moderno che garantisce un prodotto di grande affidabilità.

Le geometrie delle alette a contatto con l'aria e le geometrie dei passaggi interni dell'olio sono studiate per garantire la massima efficienza del sistema. Inoltre l'attenta scelta delle elettrovalvole o delle ventole azionate da motore idraulico e dei convogliatori in ABS garantiscono un insieme che consente grandi rese pur tenendo in massima considerazione i parametri di sicurezza e di rumorosità.

INSTALLAZIONE

Per una corretta installazione si consiglia di adottare dei supporti elastici e di montare lo scambiatore in una zona con ridotte vibrazioni ed urti. Inoltre il posizionamento deve consentire all'aria libera circolazione sia in aspirazione che in scarico (Fig.1). Evitare che l'aria sia riscaldata dai componenti esterni tipo marmite motori o altro.

Si raccomanda di evitare brusche variazioni di portata e di non superare la pressione di esercizio statica massima ammissibile che è di 15 bar ad una temperatura di 130°C.

Per la sicurezza dello scambiatore si suggerisce l'installazione di una valvola di bypass, questo consentirà di ridurre i rischi in avviamento dell'impianto a freddo (Fig.2).

Il sistema By-Pass integrato nella massa radiante, è disponibile a richiesta su tutti i modelli.

PERSONALIZATION

FIRA considers the unique needs of each client and each application. That's why each request is carefully evaluated before we propose suitable design solutions. This is the method applied on a day to day basis as we develop fully tailored products, and it has formed the ideal training environment for our personnel, supporting the accumulation of an impressive store of technological know-how.

CONSTRUCTION FEATURES

FIRA heat exchangers are built in brazed aluminium alloy in a thoroughly modern process that guarantees top quality totally reliable results.

The geometry of the tube fins in the air stream and the inside of the oil-ways is designed to support the maximum efficiency of the system. The same meticulous attention is applied to selecting electric fan units or hydraulically driven fans and ABS shrouds, to assure a finished product that guarantees maximum efficiency and exemplary safety and noise levels.

INSTALLATION

For correct installation use flexible supports and install the heat exchanger in a place that is protected from vibration and impact. The unit must also be mounted so as to ensure unrestricted intake and exhaust air flows (Fig.1). All possible measures must be taken to prevent the heat exchanger from drawing in warm air heated by external components such as engine exhaust systems. We also recommend avoiding sudden changes of flow rate and ensuring that the maximum permissible static working pressure of 15 bar at 130°C is not exceeded.

For increased safety of the unit, clients are advised to install a bypass valve to reduce start up risks when the system is cold (Fig.2).

Integrated By-Pass system is available on request on all models.

PERSONALISIERUNG

Jeder Kunde und jede Anfrage erfährt bei FIRA eine den jeweiligen Anforderungen entsprechende Behandlung. Die Anfragen werden zunächst sorgfältig ausgewertet, anschließend erfolgt die Ausarbeitung möglicher Lösungen. Mit dieser Vorgehensweise, die sich für die Umsetzung kundenseitiger Wünsche täglich neu bestätigt, hat das Unternehmen die Ausbildung der eigenen Mitarbeiter optimiert und sich ein umfassendes technisches Know-how zugelegt.

ALLGEMEINE GEBRAUCHSANLEITUNG

Die FIRA-Wärmetauscher sind aus Aluminiumlegierung mit Schweißlötzung gefertigt, ein modernes Produktionsverfahren, das eine hohe Zuverlässigkeit der Produkte gewährleistet.

Form und Größe der Kühlrippen mit Luftkontakt und der innenliegenden Oldschläufe sind so projektiert, daß die maximale Leistungsabgabe des Systems sichergestellt wird. Die sorgfältig ausgewählten Elektrolüfter, Lüfter mit Hydraulikmotorantrieb und Fördervorrichtungen in ABS werden höchsten Ansprüchen gerecht und weisen optimierte Eigenschaften bezüglich Sicherheit und Geräuschemissionen auf.

INSTALLATION

Zur korrekten Installation empfiehlt sich die Verwendung von schwungsdämpfenden Halterungen; die Montage des Wärmetauschers ist zudem in Bereichen vorzunehmen, in denen Vibrationen oder Stöße nur in reduziertem Maße zu erwarten sind und eine freie Luftzirkulation sowohl für die Ansaugung als auch für den Auslaß sichergestellt ist (Abb. 1). Bei der Positionierung ist ferner zu beachten, daß die Luft nicht durch außenliegende Teile, z.B. Auspuff oder dergleichen, erwärmt wird. Beim Betrieb ist darauf zu achten, daß plötzliche Änderungen der Durchflußmenge vermieden werden und der maximal zugelassene statische Druck von 15 bar bei einer Temperatur von 130°C nicht überschritten wird.

Zur Sicherheit des Wärmetauschers ist die Installation eines Bypass-Ventils vorzusehen, welches die Risiken bei einem Kaltstart der Anlage reduziert (Abb. 2).

Das integrierte By-Pass-System im Strahlungskörper ist auf Anfrage für alle Modelle lieferbar.

A causa delle svariate condizioni di montaggio e delle differenti sollecitazioni alle quali risultano sottoposti gli scambiatori di calore, riteniamo sia utile ed importante chiedere la collaborazione della nostra organizzazione tecnica al momento della progettazione dell'impianto.

Ogni scambiatore di calore è dotato di un libretto di istruzioni che contiene elementi fondamentali indicazioni per un montaggio corretto.

SICUREZZA

Nell'utilizzo delle scambiatori di calore occorre attenersi ad alcune importanti avvertenze.

- non togliere le protezioni dalle ventole.
- far eseguire i collegamenti elettrici a personale specializzato seguendo gli schemi allegati.
- le superfici esterne dello scambiatore potrebbero avere temperature molto elevate bisogna quindi prevedere nel montaggio adeguate protezioni, o posizionamenti poco accessibili.
- non intervenire sul motore idraulico senza prima avere scollegato i tubi.

Because of the differing installation conditions and the various type of stress to which the units may be subjected, we advise clients to consult our Engineering Department during their system design phase.

Each heat exchanger is supplied with a comprehensive instruction booklet that contains important recommendations for correct installation.

SAFETY

During operation of our heat exchangers observe the following instructions:

- do not remove the fan grilles
- electrical connections must be made by skilled electricians in accordance with the attached electrical diagrams
- exterior surfaces of the heat exchanger may reach high temperatures so adequate guards must be installed or the unit must be mounted in an inaccessible position.
- do not perform work on the hydraulic motor until the hydraulic pipelines have been disconnected.

Aufgrund der unterschiedlichen Montagebedingungen und der verschiedenen Belastungen, denen die Wärmetauscher ausgesetzt sein können, empfiehlt sich bei der Projektierung der Anlage die Zusammenarbeit mit unserer technischen Abteilung.

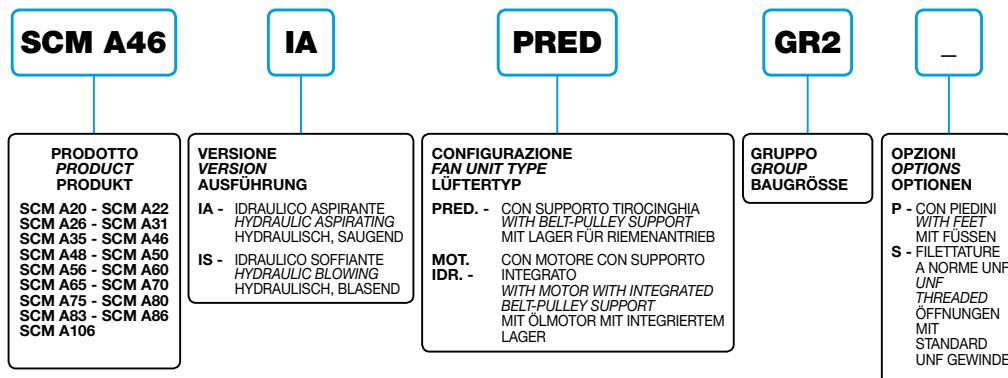

Zum Lieferumfang jedes Wärmetauschers zählt eine entsprechende Gebrauchsanleitung mit den wesentlichen Hinweisen für eine korrekte Montage.

SICHERHEIT

Beim Gebrauch des Wärmetauschers sind folgende wichtige Hinweise zu beachten:

- Schutzaufnahmen an den Lüftern auf keinen Fall abnehmen;
- elektrische Anschlüsse von Fachpersonal und gemäß den beiliegenden Plänen ausführen lassen;
- die Außenoberflächen des Wärmetauschers können beim Betrieb sehr hohe Temperaturen aufweisen; bei der Montage sind demnach entsprechende Schutzaufnahmen vorzusehen oder schwer erreichbare Positionen auszuwählen;
- Eingriffe am Hydraulikmotor nur nach Abnahme der Leitungen vornehmen.

ISTRUZIONI PER L'ORDINAZIONE ORDERING INSTRUCTIONS BESTELLANLEITUNG

NOTA:

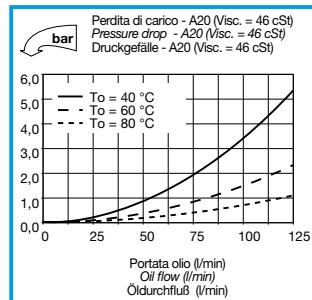

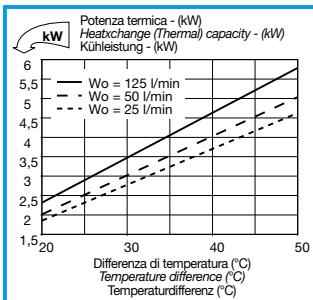

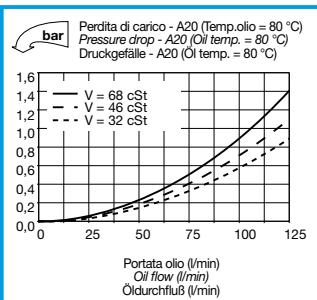

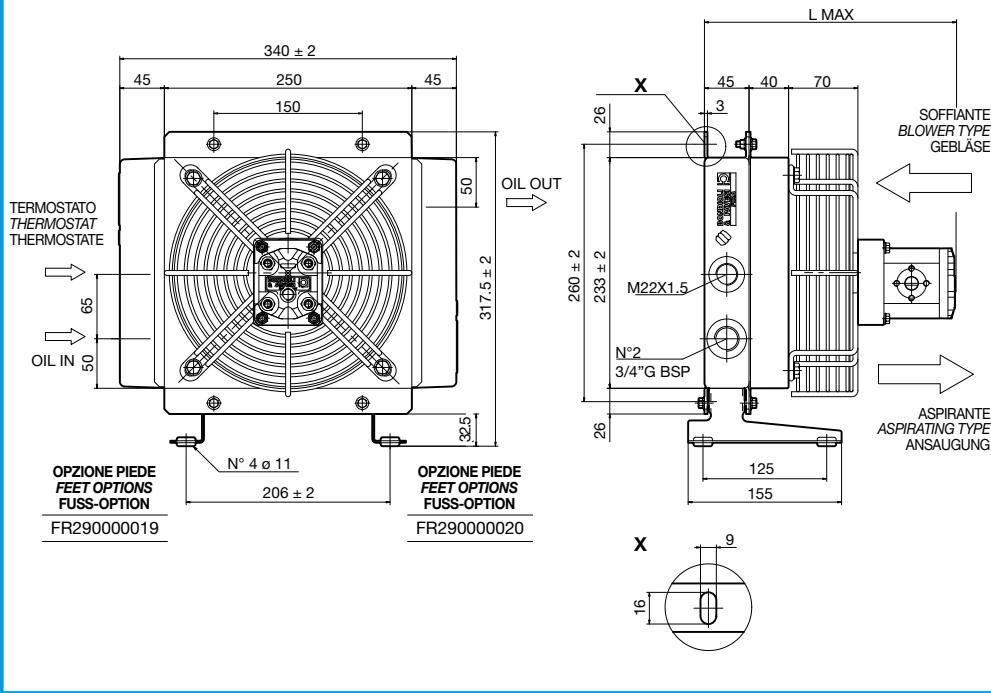

Lo scambiatore non prevede di serie il termostato e i piedini. Vedere per i piedini ogni singolo modello. Riferirsi a pag. 24 per informazioni sugli accessori, le possibilità di scelta e le istruzioni di ordinazione.

NOTE:

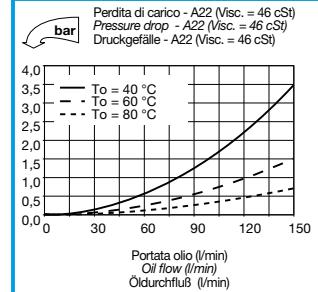

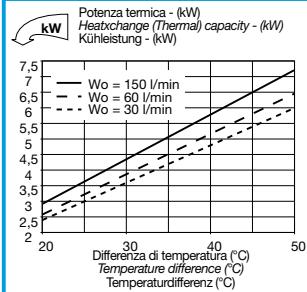

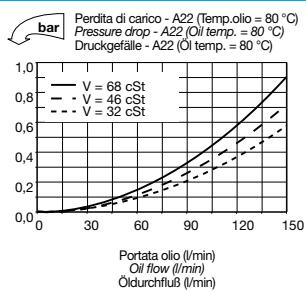

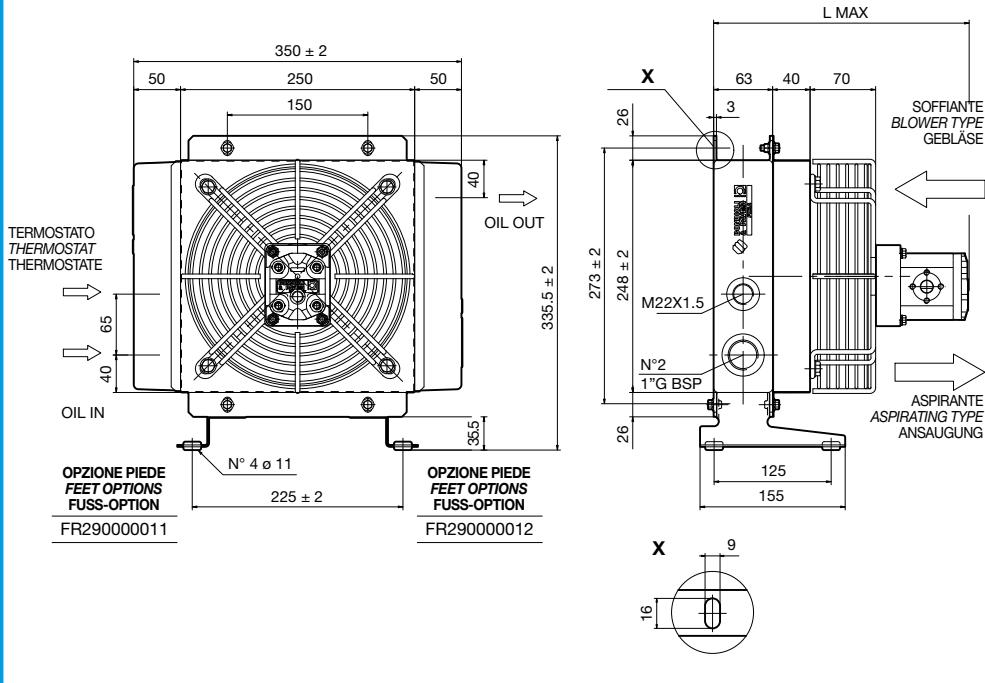

*Heat exchangers are not equipped with thermostat and feet as a standard.
Please refer to each model to have your heat exchanger supplied with feet, and to page 24 for accessories and for a description of available range and ordering instructions.*

ANMERKUNG:

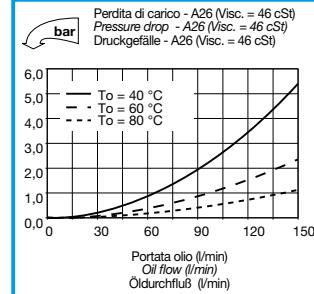

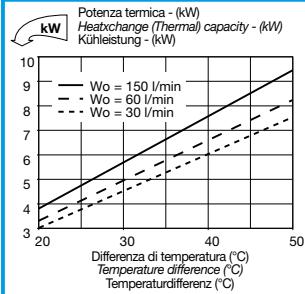

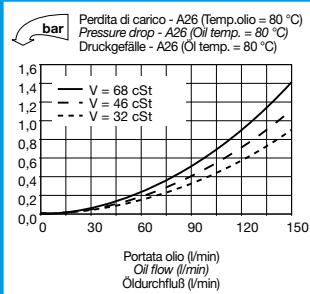

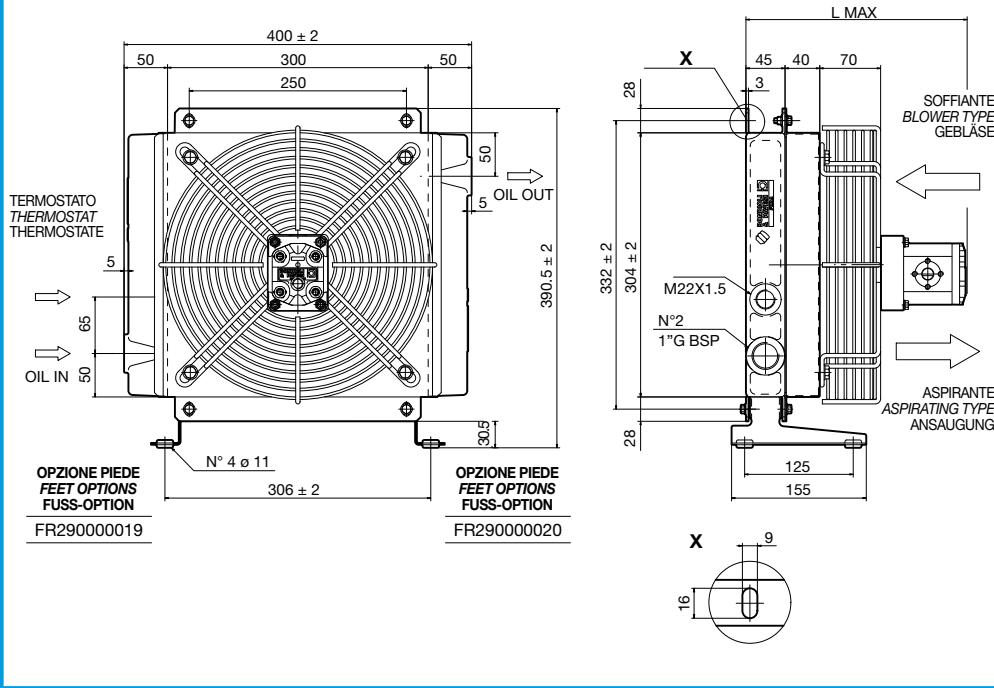

Der Wärmetauscher wird serienmäßig ohne Füsse und Thermostat geliefert. Die Füsse sind bei jedem Modell ersichtlich. Auf Seite 24 sind Infos über Zubehör, Auswahlmöglichkeiten und Bestellnummern zu finden.
