LARRAIOZ BASQUE AUTOMATION

Who are we?

Larraioz Basque Automation (LBA) are industrial electronic devices, designed, manufactured, distributed and supported by [Larraioz Elektronika](#).

With more than **30 years of experience** behind us, we **design, manufacture** and **support electronic control machine and processes**. We provide automation systems for the full control of the machine (PC + PLC + HMI + Motion), with a **unified** and **proprietary solution** (OEM) of the electronic part of the machine and process.

Larraioz systems are **tailored** and **customized** to the machine needs, with selected automation solutions. In addition, **we train and provide guidance** to the staff in charge of the handling, handing the **full control** of the machine.

Benefits

3. Empower your own brand

The CPU is one of the most visible elements of many industrial machines.

The presence of the machine manufacturer's brand, **not just on the body of the machine but also on its brain**, it's a sign of distinction.

1. Made in The Basque Country

For many years, Made in Basque Country has been **synonym of true expertise, good practice, quality and trust**. Our CPUs are designed, manufactured, assembled and tested in our factory based in Aia, Basque Country.

2. Ensure your supply

Protect yourself from different external situations, which **put at risk the supply** of key components in the manufacturing process of your machines, such as the gathering of technologies or logistic problems in times of crisis.

4. Protect yourself from obsolescence

Define with us your roadmap needs for regular availability and service, and be **independent** of the obsolescence of sensitive technologies when developing your solutions.

6. Stand out among the competition

In a highly competitive market, **the added value lies in the know-how**: custom devices and programming platforms that do not rely on commercial technological libraries, and help protect and cultivate the implementation of expert knowledge.

5. Separate the hardware from the software

Do not depend on the bridging between the hardware device and the programming platform. **Centralize your software** needs on platforms that are universal and compatible with different versions and devices

Powered by:

8. Control the after-sales market

The industrial market demands long-term solutions. Also, **quality** support is required throughout the life of the product.

A **customized solution** allows the machine manufacturer to **protect and control the entire after-sales service.**

7. Limit the solution to your needs

Solution scalability in those parameters that require it. Do not look for the commercial device that best fits your needs, but rather **customize the device to your own specific requirements.**

Would you like to get to know more?

Call us for a quick or a long chat.

We will do all the rest.
