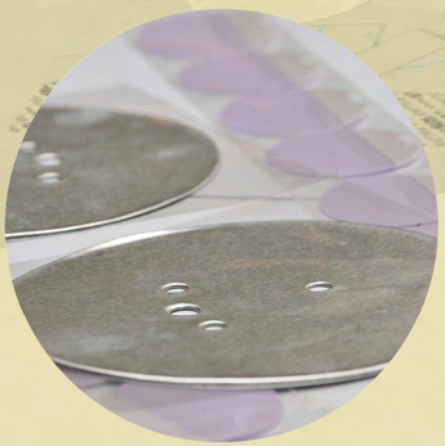
OpTIM™



It is a widely recognized in the electronics industry that thermal interface materials (TIM's) are crucial in maintaining reasonable life and reliability of most heat generating electronic components. As electronic components require increasing watt densities, Schlegel Electronic Materials line of high performance TIM's can provide Design Engineers with solutions to thermal management problems.

Schlegel Electronic Materials OpTIMTM products are a line of thermal interface materials that offer a wide range of thermal performance and physical properties, and can resolve even the most challenging thermal problems. These TIM's have already been widely used in electronic equipment/components including microprocessors, high speed memory modules, micro heat pipe assemblies and LED lighting.

Our manufacturing facility located in Dongguan China is ISO 9001 certified, and supported by our North American and European facilities provide worldwide product coverage. Coupled with the capability of die-cutting products into any shape and size, Schlegel can provide the designer with cost effective and easy-to-use thermal management solutions.

Schlegel's vow is to uphold our attitude of excellent customer service and technical support. We stand ready to meet your thermal needs.
